¹ Includes busses. A substantial part of the trucks and busses reported comprises chassis without body; hence value of bodies for these chassis not included. Includes military trucks; total sales for the period Sept. 1, 1939, through 1946, amounted to 2,575,000, valued at \$5,257,588,000. Production for the period Jan. 1, 1940, through 1946 was 2,601,000.
³ Prior to 1925, busses included with passenger cars. ¹ Less than 500.

1 Excludes vehicles owned		y services, o	r by Mariti	me Comm	ission.			

Excludes vehicles owned by military services, or by Maritime Commission.
 As reported. State registration requirements differ widely.
 Includes registration fees, certificates of title, transfer or registration fees, permits, fines, etc.; excludes motorfuel and motor-carrier taxes; for California, includes \$40,851,000 vehicle license fees and for Washington, \$6,677,000

motor vehicle excise taxes.

4 Includes fees for registration of automobiles (including taxicabs), busses, and trucks and tractor trucks

5 Commercial full trailers included with trucks.

7 Data for trucks under 1,500 pounds capacity included with automobiles.

8 Estimated.

9 Data for taxicabs included with trucks.

10 Trailers shown are house trailers. Commercial trailers and semitrailers registered with truck or tractor as a unit.

11 Includes 1,319 automobiles of the diplomatic corps.

12 Represents publicly owned only. Heavy semitrailers registered with tractors (as a unit); full trailers not permitted. Automobile trailers not required to register.

21. Transportation, Air and Land—Steam and Electric Railways, Express Companies, Motor Busses, and Civil Aeronautics

Steam railways.—Because of the long period in which it has been subject to close Federal regulation and the degree of its consolidation, there is an extensive coverage of important statistical items relating to the railway industry. The Statistics of Railways in the United States, published annually by the Interstate Commerce Commission since 1888, is the most important source for steam railway statistics. Various other periodical reports are also issued by the Interstate Commerce Commission. The Association of American Railroads supplements official railway statistics with various releases.

The term "steam railways" as used in this section includes electrified divisions operated by such carriers. The total steam railroad mileage of the United States comprises: (a) Regular interstate carriers (and their nonoperating subsidiaries) reporting to the Interstate Commerce Commission, (b) switching and terminal railroads, also reporting to the Commission; and (c) private railroads (defined by the Commission as "circular" because they report on brief circulars and as "unofficial"). Except in certain mileage data the circular and unofficial companies are not included in any of the statistics. The switching and terminal roads were formerly included with operating railways, but are now separated, and data for them do not appear in most of the tables.

Nonoperating subsidiaries include proprietary companies, which are covered by the reports of operating carriers, and lessor companies which have no traffic and whose reports appear only in statistics of capitalization, dividends, and investment.

Operating railways are divided into three classes, according to the amount of their annual operating revenues, class I, having more than \$1,000,000 of such revenue; class II, from \$100,000 to \$1,000,000; and class III, less than \$100,000. During recent years more detailed reports are required from class I carriers than from smaller companies. The basis of the figures in each table is indicated by notes. Omission of class II and class III railroads affects very little the comparability of statistics with those of earlier years as regards most items, since the bulk of the business is done by class I.

The Interstate Commerce Commission divides railroads geographically into three districts and eight subsidiary regions. Each railroad is treated as a unit and placed wholly in some one district or region. Broadly speaking, the eastern district includes territory east of Chicago and north of the Ohio and Potomac Rivers; southern district, territory east of the Mississippi River and south of the Ohio and Potomac Rivers; and western district, the remainder of the country.

Electric railways.—The Interstate Commerce Commission issues annually an abstract of the annual reports of electric railways, chiefly interurban, which report to it. The American Transit Association publishes street railway statistics in its annual Transit Fact Book. The Bureau of the Census has published a quinquennial report on electric railways from 1902 to 1937. In the more recent years the report also covered affiliated trolley-bus and motor bus operations. The last Census of Electrical Industries was for the year 1937.

Motor carriers.—Statistics of class I for-hire carriers (those with \$100,000 or more of gross annual operating revenues) are compiled by the Interstate Commerce Commission from annual and quarterly reports submitted to it by these carriers. This series begins with 1939 data.

The annual review and statistical number of Bus Transportation, a McGraw-Hill publication, summarizes operations of common carriers and school busses.

Civil aeronautics.—Federal promotion and regulation of civil aviation are carried out by two bodies—the Civil Aeronautics Administration and the Civil Aeronautics Board. The Civil Aeronautics Board is an independent agency concerned primarily with the issuance of certificates of public necessity, economic regulation, the formula-

tion of safety regulations and the investigation of accidents to civil aircraft. Civil Aeronautics Administration is an operating agency of the Department of Com-Its principal activities are the building and operation of air navigation aids, the enforcement of safety regulations and promotion of a national airport system.

The Statistical Handbook of Civil Aviation is published by the Civil Aeronautics Administration. This Handbook brings together all official statistical data on the development of civil aviation in the United States, including summaries of statistics published by the Civil Aeronautics Board in Annual Airline Statistics. Aeronautics Administration has also published a detailed historical record of America's aircraft production during the recent war. This publication is entitled U.S. Military Aircraft Acceptances, 1940-45-Aircraft, Engine, and Propeller Production.

Historical statistics.—In this section, tabular headnotes (as "See also Historical Statistics, series K 28-33'') provide cross-references, where applicable, to Historical Statistics of the United States, 1789-1945. In that historical supplement to the Statistical Abstract, statistics are carried back year by year as far as possible. the historical appendix of the present issue of the Abstract for specific titles of series and the earliest year shown in the supplement.

Includes circular and unofficial companies.
 Includes lessors, proprietary, circular, and unofficial companies.
 For railways reporting track by class.
 Includes switching and terminal companies except as noted.
 Since 1916 represents steam locomotives and freight cars of class I railways, excluding switching and terminal companies.

ompanies.
§ Includes lessor companies since 1921; for 1925 and subsequent years, also includes proprietary companies except
those which are part of systems filing consolidated annual reports.

7 Increase in investment over a period of years cannot be obtained accurately by subtraction of 1 year's investment from that of another owing to reorganization, sale, or abandonment reclassification, etc.

§ Includes depreciation on "Miscellaneous physical property" for years prior to 1920. Amortization of defense projects included subsequent to 1940.

§ Includes actually outstanding, nominally issued, and nominally outstanding securities, and equipment

obligations.

10 Average for 1908–1910. 11 Average for 1899 and 1900.

No. 593.—Steam Railways—Miles of Road Owned, by States: 1860 to 1948

[Data are for actual length of line in each State without duplication. Figures relate to June 30 prior to 1920 and Dec. 31 thereafter; they include reporting circular, and unofficial railways, but beginning with 1910 exclude switching and terminal roads. See also *Historical Statistics*, series K 1, 2, and 29 for annual U. S. totals]

No. 594.—Steam Railways (All Reporting Companies)—Equipment in Service 1925 to 1948

["All reporting companies" include switching and terminal but not circular and unofficial lines. Data for tractive effort and capacity of cars exclude switching roads, also smaller roads during recent years; they would not be materially different if all carriers were included. Excludes the large number of cars owned by private car lines. See also Historical Statistics, series K 34-38]

¹ Includes proprietary companies. Increase in investment over a period of years cannot be obtained accurately by subtraction of 1 year's investment from that of another owing to reorganization, sale or abandonment, reclassification, etc.

2 Amortization of defense projects included subsequent to 1940.

3 Excludes returns for lessor companies.

4 Investment originally published is increased by \$170,000,000, estimated reserve for accrued depreciation, to make figures comparable with those of other years.

3 Figure not comparable on account of Federal control accounting requirements.

5 Excludes returns for class II and class III companies.

No. 602.—Steam Railways—Revenues, Expenses, and Income: 1926 to 1948

[Method of calculating net revenue and net operating income is more fully shown in table 604. Excludes switching and terminal companies; operating revenues of switching and terminal companies: 1946, \$143,039,000; 1947, \$188,560,000; 1948, \$217,306,000; operating expenses: 1946, \$120,500,000; 1947, \$138,057,000; 1948, \$154,442,000. See also Historical Statistics, series K 71-79]

No. 613.—Steam-Railway Accidents—Number of Persons Killed and Injured, by Status: 1891 to 1948

[For various reasons, including fact that returns were required under different acts, statistics are not strictly comparable. Prior to 1921, train accidents were those causing damage to railway property in excess of \$150 or any damage and a resulting casualty. Thereafter they were considered as such when damage exceeded \$150 with or without a casualty. Where damage is less than \$150 and there is a reportable casualty it is classified as a train-service accident. Figures for years 1911–15 include industrial and other nontrain accidents to employees only, and for years 1908–10 exclude switching and terminal roads. Otherwise, data cover all reportable accidents, including those due to suicide, mental derangement, and attempting to escape custody. See also Historical Statistics, series K 84–93]

No. 616.—ELECTRIC RAILWAYS—SUMMARY: 1890 to 1937

[The census of street railways, which was first taken in 1890, and which has been taken at quinquennial intervals through 1937 beginning with the inquiry for 1902, covers (1) all street railways, without regard to kind of motive power, and (2) all interurban railways using other than steam as motive power. The nonelectric railroads included are those operated principally by cable and gasoline engines. Operations of electrified divisions of steam-railway companies are not included. Figures in this table do not include data for motorbus and trolley-bus oper-ations of electric street railways. (For motorbus and trolley-bus statistics from census reports, see source))

ITEM	1890	1902	1912	1922	1927	1932	1 1937

Source: Department of Commerce, Bureau of the Census; Census of Electrical Industries, report on Street Railways and Trolley-Bus and Motorbus Operations. Survey discontinued.

¹ Excludes data for 22 companies, operating on a part-year basis. These companies reported 36,810,221 passengers; 9,108,009 car-miles; 1,042,866 car-hours; \$2,388,295, operating revenue; and \$2,412,010, operating expense.
² Includes certain companies in Pennyslvania which maintained separate organizations, though controlled through stock ownership by other companies. For 1912 these companies were treated as merged and not included

through stock ownership by other companies. For 1912 these companies were treated as merged and not included in the number reported.

§ Includes sm. Il mileage of track lying outside United States.

§ Includes sm. Il mileage of track lying outside United States.

§ Includes sm. Il mileage of track lying outside United States.

§ Includes sm. Il mileage of track lying outside United States.

§ Number reported so of the companies engaged in both light-and-power and electric-railway operations were unable to report separately the values of plant and equipment assignable to their railway activities.

§ Number reported as of June 30, for 1890, 1922, 1927, and 1932; for 1902, average for the year; for 1912, as of Sept.

§ Includes 334 trolley-bus operators.

§ Includes 29,721,000 trolley-bus passengers.

§ Includes auxiliary operating revenues of \$8,905,000 for 1927 and \$91,242,000 for 1922; auxiliary expenses, \$7,822,000 for 1927, and \$49,232,000 for 1922. Data for operating revenues and operating expenses of auxiliary operations excluded so far as possible for earlier years.

Source: Interstate Commerce Commission; annual report, Statistics of Class I Motor Carriers.

¹ Amortization represents a very small part of this total.
² Does not include Federal or State income taxes.
² Withdrawals of sole proprietors and partners.
² United the proprietors and partners.
² Does not include drivers of equipment engaged by these carriers to perform "purchased transportation."
² Includes collection and delivery employees as follows: 1943, 21,180, compensation, \$44,402,000; 1944, 21,111, compensation, \$48,78,000; 1945, 21,444, compensation, \$51,441,000; 1946, 24,630, compensation, \$63,353,000; 1947, 29,000, compensation, \$83,370,000.
² Includes duplications on account of tonnage received from connecting motor earriers.
² Basic figures include expenses of operating vehicles in intercity and local services; these expenses are not separable. Comparisons of revenue and expense per intercity vehicle-mile are therefore subject to qualification.

No. 622.—Class I Intercity Motor Carriers of Passengers—Summary of Financial and Operating Statistics: 1943 to 1947

[All money figures, except average fare and average revenue and expense per vehicle-mile, in thousands of dollars. Covers carriers with average annual operating revenues of \$100,000 or more engaged wholly or preponderantly in intercity service subject to jurisdiction of Interstate Commerce Commission. This table does not include carriers subject to the Commission's jurisdiction engaged wholly or preponderantly in local or suburban service or carriers engaged in transportation of both property and passengers]

Regular route intercity and local revenue.

Source: Interstate Commerce Commission; annual report, Statistics of Class I Motor Carriers.

A Regular route intercity and local revenue.

2 Amortization represents a very small part of this total.

Excludes Federal or State income taxes.

Withdrawals, small in amount, of sole proprietors and partners.

Total vehicles owned at close of year.

Includes bus-miles of vehicles operated under "purchased transportation arrangements."

Includes only service on local and suburban runs of preponderantly intercity carriers.

A vergage for whicle and leaved whiteles.

⁸ Averages for owned and leased vehicles.

¹ Includes United States-financed aircraft manufactured in Canada.

Preliminary.
 Includes bus miles in line service, charter miles, and deadhead miles.
 Excludes income and excess-profit taxes.
 Not available.
 Exclusive of common carrier busses furnishing school service.

Source: Bus Transportation, Annual Review and Statistical Number; published by McGraw-Hill Publishing Co., Inc., New York, N. Y.

Includes of microscates infanced are rather manufactured in Canada.
 Includes military aircraft for lend-lease shipments.
 Value of aircraft, engines, parts, parachutes, etc.
 For military aircraft produced in U. S. only; computed by War Production Board in terms of August 1943 unit costs.
 1910 figure for second half of year only; 1945 figure covers only first 8 months.
 Not available.
 A regional delicate and between the language.

⁶ Exclusive of gliders and barrage balloons.

Source: Department of Commerce, Civil Aeronautics Administration and Civil Aeronautics Board; published in CAA Statistical Handbook of Civil Aviation.

- 1 Preliminary.
 2 Not available.
 3 Data for domestic passengers include duplication. Data for 1934 include nonrevenue passengers.
 4 Includes nonrevenue miles.
 5 Excludes Colonial Airlines, Inc., and Hawaiian Airlines, Ltd.
 6 Excludes 224,236 ton-miles flown by U.S. Army.
 7 Excludes regular mail carried under special contract, and foreign mail.
 8 Revised in accordance with current definition of accident. Excludes propeller accidents to persons, accidents which occurred in military contract flying, and accidents of a minor nature which were carried in previous figures.
 9 Data as of December 31.
 19 Data include continental United States, and Territories and possessions wherever applicable.

- Pota as of December 31.
 Data include continental United States, and Territories and possessions wherever applicable.
 Public use and public services, municipally owned and/or operated.
 Public use and public services, privately owned and operated.
 Public emergency use, no services, CAA operated.
 Includes military (public restricted, military operated); private (public emergency use only, no public services, privately owned for personal use); and miscellancous government (public emergency use only, no public services, Government-owned Forest Service, etc.).
 As of April 1, 1948.
 Estimated. 1847 includes 13,305,000 miles not elsewhere classified; 1948, 18,065,000 miles.

¹ Class I airports are for private owners of smaller type aircraft (Sub I airports are those below Class I standards); Class II, private owners of largest type aircraft and feeder transport aircraft; Class III, present day transport aircraft; Classes IV and over, largest aircraft now in use and those planned for immediate future.

² Airport type definitions: Commercial—Public use and public services, privately owned and operated. Municipal—Public use and public services, municipally owned and/operated. CAA Intermediate—Public emergency use, no services, CAA operated. Military—Public restricted, military operated. All others—(a) Public emergency use only, no public services, privately owned for personal use; (b) Public emergency use only, no public services, Government-owned Forest Service, etc.

22. Waterways, Water Traffic, and Shipping

Data in this section cover the following areas unless otherwise indicated: From Corps of Engineers, Department of the Army, Bureau of Census, and Bureau of Customs, United States customs area which includes Alaska, Hawaii, and Puerto Rico, and, from Jan. 1, 1935, through Dec. 31, 1939, Virgin Islands; from United States Maritime Commission and War ShippingAdministration, continental United States.

Units of measurement.—"Cargo tonnage" represents weight of cargo in long tons (2,240 pounds) or short tons (2,000 pounds). All other tonnage figures refer to capacity of vessels. The terms gross and net tonnage refer to space measurement, 100 cubic feet being called 1 ton. Gross tonnage is the capacity of the entire space within the frames and the ceiling of the hull, together with those closed-in spaces above deck available for cargo, stores, passengers or crew, with certain minor exemptions. Net or registered tonnage is what remains after deducting from the gross tonnage the spaces occupied by the propelling machinery, fuel, crew quarters, master's cabin, and navigation spaces. It represents substantially space available for cargo and passengers. The net tonnage capacity of a ship recorded as "entered with cargo" may bear little relation to actual weight of cargo. Dead weight tonnage is the weight in long tons required to depress a vessel from light water line (that is, with only the machinery and equipment on board) to load line. It is therefore the weight of the cargo, fuel, etc., which a vessel is designed to carry with safety. Displacement tonnage (naval vessels) has reference to weight of the vessel itself with its normal equipment, fuel, etc.

Types of vessel shipments.—Shipments by dry cargo vessels include shipments on all types of watercraft except tanker vessels, and shipments by tanker vessels include all types of cargo both liquid and dry carried by tanker vessels.

Vessel entrances and clearances.—The tables on vessel entrances and clearances show the number and net registered tonnage of American and foreign dry cargo and tanker vessels with cargo and in ballast entering and clearing the United States customs area in the foreign trade and indicate the customs districts at which these vessels first entered and from which they last cleared. All types of watercraft engaged in the foreign trade which are required to make formal entrance and clearance under United States customs regulations are included in the statistics. Army and Navy vessels entering or clearing without commercial cargo are not included in the figures. The tons shown in tables 650–655 are not tons of 100 cubic feet carrying capacity of the vessels (as defined in Part 16 of Title 46, "Code of Federal Regulations, Measurements of Vessels") and do not represent the actual weight of cargo carried.

A vessel is reported as entered at the first port in the United States at which entry is made, regardless of whether any cargo is unladen at that port. Vessels touching at a United States port in distress, or for other temporary causes without discharging cargo are not included in the figures.

A vessel is reported as cleared from the last port where outward cargo is completed or where the vessel cleared in ballast. Vessels touching at a United States port in distress, or for other temporary causes without discharging cargo are not included in the figures.

Historical statistics.—In this section, tabular headnotes (as "See also Historical Statistics, series K 132-145") provide cross-references, where applicable, to Historical Statistics of the United States, 1789-1945. In that historical supplement to the Statistical Abstract, statistics are carried back year by year as far as possible. See also the historical appendix of the present issue of the Abstract for specific titles of series and the earliest year shown in the supplement.

No. 628.—WATER-BORNE COMMERCE OF THE UNITED STATES—CARGO TONNAGE, Foreign and Domestic: 1943 to 1948

¹ Figures are not for each type of traffic; no adjustments required to arrive at not totals.

2 Preliminary.

Represents traffic local to seaports, Great Lakes ports, and communities on inland waterways.
Represents traffic among ports and communities utilizing inland waterways exclusively.
Excluding St. Marys Falls Caual traffic and additional Detroit River traffic, data for which are already included.

in figures for Great Lakes traffic; also excluding duplications relating to rivers and canals themselves Frincipally coastwise and lake traffic passing through canals and connecting channels other than the St. Marys Falls Canal and Detroit River.

7 Estimated from figures in this table on assumption that all deductions represent duplications in domestic traffic; includes some minor duplications in figures for foreign traffic.

Source: Department of the Army, Corps of Engineers, Annual Report of Chief of Engineers, Part II. except for 1918 data, which are preliminary.

No. 629.—Freight Traffic on New York State Canals—Tonnage Moved: 1837 то 1949

[In short tons of 2,000 pounds. Excludes tonnage handled over State terminals but not moved through any portion of canal channel. East-bound tonnage is that moving toward Albany, west-bound is that moving away from Albany. See also Historical Statistics, series K 170]

No. 630.—Commerce of Principal United States Ocean Ports: 1948

[In thousands of short tons of 2,000 pounds. In addition to commerce here shown, many ports have (1) commerce with ports on internal rivers and canals; (2) purely local port traffic, including, for New York and San Francisco, what is called intraport traffic between ports of a harbor for which separate statistics are maintained. These forms of traffic, although aggregate tonnage is large, are of much less economic importance than foreign and coastwise traffic]

Canal boats and barges included with sailing prior to 1868.
 Decrease of tonnage arises principally from registered tonnage having been corrected in 1818, 1829, and 1830 by omitting all vessels with registers granted prior to 1815, which were presumed to have been lost at sea, captured,

etc.
3 Including Puerto Rico and Virgin Islands.
4 Including Hawaii and Alaska.

No. **640.**—Merchant Vessels Launched in the World and in the United States: 1910 to 1949

[Vessels of 100 gross tons and over. For definition of "gross ton" see genera note, p. 524. Beginning 1941 sailing ships and nonpropelled craft are included for Great Britain and N. Ireland only. For period of Second World War (1939-45), figures exclude any information from enemy and enemy-occupied countries, as well as from Russia. Returns are still not available from Germany and Russia.

¹ Includes masters of vessels: excludes personnel employed on vessels under bareboat charter, or owned by Army or Navy.

Source: U. S. Maritime Commission, records

² After deduction of canal earnings repaid to appropriations.

³ Italies denote deficit.

⁴ No interest charge against the Canal is actually made by the Treasury. In order to present the net results of operation of the Canal, interest on capital invested is computed at a rate considered reasonable for Government borrowings over an indefinite period. Computed interest prior to July 12, 1920, is included in capital investment account.

[§] Includes adjustment of \$15,000 in postal surplus.
§ Includes adjustment of \$44,000 in postal surplus.
§ Includes adjustment of \$44,000 in postal surplus.
§ Actual business profits of \$877,000 adjusted by \$660,000 for write-off of reimbursable capital expenditures, public works, Republic of Panama.

§ Includes \$23,000 for prior fiscal years.
§ Includes \$23,000 for prior fiscal years.

Includes \$292,000 for judgments rendered by Court of Claims for overtime compensation in prior years.

No. 646.—Water-Borne Imports and Exports—Cargo Tonnage, by Flag of Carrier Vessel, 1921 to 1949, and by Coastal Districts, 1943 to 1949

[In cargo tons of 2,240 pounds. Excludes cargoes (small in aggregate) carried by ships of less than 100 tons gross capacity]

No. 655.—Vessels Entered and Cleared at Seaports in Foreign Trade— Net Registered Tonnage, by Nationality of Vessel: 1921 to 1946

[In thousands of net tons. Includes only traffic by sea and to and from foreign countries. The large trade with Canada on the Great Lakes and the St. Lawrence is handled primarily by vessels of the United States and of the British (Canadian) flag. British (Canadian) flag véssels predominate in this trade. See tables 652 and 653 in which the columns for northern border represent trade with Quebec and Ontario]

23. Irrigation, Drainage, and Soil Conservation

Historical statistics.—Tabular headnotes (as "See also Historical Statistics, series F 56-59") provide cross-references, where applicable, to Historical Statistics of the United States, 1789-1945. In that historical supplement to the Statistical Abstract, statistics are carried back year by year as far as possible.

No. 656.—Irrigation Enterprises—Summary: 1910 to 1940

[Data are for the 17 Western States and Arkansas and Louisiana. Tables 656, 658, and 659 relate to irrigation enterprises of all types, including those operated by individual farmers. They are based on reports of management of enterprises. An enterprise is defined as "an independent irrigation establishment owning or operating works for supplying water to agricultural land." See also Historical Statistics, series F 56-59]

A farm reporting both irrigated and nonirrigated crops is recorded as one farm in total.
 Not available.
 Includes data for Lespedeza hay not shown separately.
 Data available only for Arizona and California.
 Computed by using acreages grown alone in all States except California, Idaho, Oregon, and Washington, there total acreages were used.
 Running square bales of lint cotton, counting round as half bales. where total acreages were used.

DRAINAGE 553

No. 662.—Drainage on Farms and Drainage Enterprises—Summary: 1920, 1930, AND 1940

[Statistics for drainage on farms in first part of this table were collected from individual farmers, while those for drainage enterprises were obtained from a special canvass of organized drainage enterprises. A farm may have artificial drainage without being included in any organized enterprise; conversely, an organized enterprise may include a farm on which there is no artificial drainage, because the enterprise facilitates removal of water from that farm. Drainage enterprises comprise public corporations and local improvement districts established under State laws relating to drainage, commercial enterprises draining land for sale, other organizations engaged in extensive land drainage work, and tracts of 500 acres or more drained by individual farm owners. Enterprises may include timbered and other unimproved land not yet in farms. Data as to drainage on farms were not collected in the census of 1940. Canvass of drainage enterprises did not include New England States, N. Y., N. J., or Pa.; Del, and Md. were included only in 1940; no enterprises were found in Ala. or W. Va. before 1940, and none in Va. in 1920. See also Historical Statistics, series F 52-55]

² Warren Act contracts are those which provide for sale of excess water to irrigation districts, i. e., water over and above project requirements. Lands served are usually located outside project proper. The act also provides for joint construction and financing of irrigation works by Federal Government and irrigation districts.

 ¹ Area for which Bureau is prepared to supply water.
 2 Includes private projects reconstructed with Government funds.
 3 Water conservation and utilization project.
 4 Although there are 177,962 areas that can be irrigated within project limits, the area for which there is considered to be a safe and reliable water supply is 155,000 acres.

No. 667.—Growth of Conservation Districts, by Fiscal Years, to June 30. 1949

Basic soil conservation district legislation has now been enacted in all of the 48 States and 4 of the Territories and possessions. Each of these laws contains an effective date after which soil conservation districts could be orpossessions. Each of these laws contains an effective date after which solic conservation districts could be of-ganized by local farmers and operators. A soil conservation district is a political subdivision of State which is determined by petition and referendum of farmers residing in area, and approved by State Soil Conservation Committee. Districts, in most cases, have authority to solicit Federal, State, county, and private assistance in carrying on their soil and water conservation program within the area. On request of local governing body of each soil conservation district, Department of Agriculture provides technical and other assistance to districts, through its several agencies. Such memorandums form basis on which any departmental assistance is provided to district for use on farms and ranches within district. After basic memorandum with Department has been signed, Soil Conservation Service signs a supplemental memorandum with each district governing body requesting assistance, to cover activities which Soil Conservation Service will help district to carry out]

Source: Department of Agriculture, Soil Conservation Service; Report of Chief of Soil Conservation Service.

¹ For specific procedure on organization of soil conservation districts, see respective State soil conservation district law. By provision of most State district laws, State soil conservation committee has responsibility for organization of districts. Local district governing bodies administer affairs of each individual district. ² Soil Conservation Service furnishes technical and other assistance to practically all districts that have entered into memorandums of understanding with Department of Agriculture. ³ Includes complete farm conservation plans being carried out by farmers in cooperation with districts, as planned. Cancellations caused by death, change in ownership, or mutual consent have been deducted. Data on plans and treated area included only work done through farmer-district cooperative agreements since Aug. 1937 with assistance of Soil Conservation Service. ⁴ Includes Imperial irrigation district.

Includes Imperial irrigation district.
 Includes 22 State cooperative grazing districts.

⁶ Includes 8 wind-erosion conservation districts.

⁷ Less than 500.

24. Agriculture—General Statistics

Statistics on agriculture are for the most part prepared by the Bureau of the Census, Department of Commerce, which conducts the Census of Agriculture and by the Department of Agriculture which prepares current annual estimates.

Beginning with 1840 a Census of Agriculture has been taken every 10 years in conjunction with the Decennial Census of Population. In 1925, 1935, and 1945 a middecennial Census of Agriculture has also been taken. Information at each census has been obtained by a personal canvass of individual farms by census enumerators. The first Census of Agriculture, however, was limited in scope. It included such items as an inventory of the principal classes of domestic animals, the production of wool, the value of poultry, the value of products of the dairy, and the production of the principal crops. The number of farms and the acreage and value of farm land were first included in the Census of 1850. In 1880 information was first secured as to the tenure under which the farms were operated. A detailed classification of farm land according to use was first obtained in 1925; in earlier censuses, farm land was classified only as improved land, woodland, and other unimproved land.

A farm as defined by the Bureau of the Census is all the land on which some agricultural operations are performed by one person, either by his own labor alone or with the assistance of members of his household, or hired employees. A tract of less than 3 acres is not considered a farm unless its agricultural products for the year covered were valued at \$250 or more. Agricultural operations consist of the production of crops or plants, vines or trees (excluding forestry operations), or of the keeping, grazing, or feeding of livestock for animal products, animal increase, or value enhancement. Included as farms are such agricultural enterprises as nurseries, greenhouses, hothouses, fur farms, mushroom cellars, apiaries, and cranberry bogs. Excluded are fish farms, fish hatcheries, ovster farms, frog farms, kennels, game preserves, parks, and the When a landowner has one or more tenants, renters, croppers, or managers, the land operated by each is considered a farm for census purposes. Thus for a plantation each cropper and tenant operation is considered a separate farm even though the entire plantation may be handled essentially as a single farm enterprise.

The land in farms includes considerable areas of land not actually under cultivation or used for pasture or grazing, but all such land must have been under the control of the operator and considered a part of his farm. Land used for grazing or pasture that was neither owned nor leased by the farm operator was not included under land in farms. Thus vast acreages of land used for grazing, such as national forests, Taylor grazing land, State lands, or other public lands, and some railroad and other privately owned lands, are not included as land in farms even though used for agricultural purposes.

Annual agricultural statistics of a wide variety have been issued currently by the United States Department of Agriculture for over 80 years—the first being as of May 1, 1863. There are now 41 field offices—1 in practically every State—which act as clearinghouses for information furnished by voluntary reporters. Information from the field offices is sent to Washington where reports covering State and national data are issued by the Crop Reporting Board of the Bureau of Agricultural Economics

Statistics compiled by the Bureau of Agricultural Economics on crops, livestock and livestock products, agricultural prices, farm employment, and other related subjects are based mainly on data obtained through mail questionnaires. The basic information is obtained from nearly three-quarters of a million reporters, located in every agricultural county in the United States, who report on one or more items during a year. These reporters, mostly farmers, report for their own and nearby farms on some 80 crops and scores of other items pertaining to agricultural production and farm family living.

Cash income is the cash receipts from farm marketings and represents the quantities of crops, livestock, and livestock products sold by farmers multiplied by the prices received per unit of production at the local market. Gross farm income includes Government payments, value of farm products consumed on the farm, rental value of farm homes, as well as cash receipts from farm marketings.

These general notes on agriculture apply also to section 25, Agriculture—Production and Related Subjects, which covers farm crops, foodstuffs, farm animals, animal products, and related subjects.

Historical statistics.—In this section, tabular headnotes (as "See also Historical Statistics, series E1 and E3-4") provide cross-references, where applicable, to Historical Statistics of the United States, 1789-1945. In that historical supplement to the Statistical Abstract, statistics are carried back year by year as far as possible. See also the historical appendix of the present issue of the Abstract for specific titles of series and the earliest year shown in the supplement.

1 Estimates

² Estimate for total population as of Jan. 1, 1945, including armed forces overseas; estimates for urban and rural s of July 1, 1945, for civilian population only.

³ For definition of urban and rural, see p. 2.

2 Estimate for total population as of Jan. 1, 1945, including armed forces overseas; estimates for urban and rural as of July 1, 1945, for civilian population only.

3 For definition of urban and rural, see p. 2.
4 1930-45 farm population comprises all persons living on farms regardless of occupation, except that 1945 figures exclude persons in dwelling units rented to others than those engaged in agricultural work; 1920 figures include also those farm laborers (and their families) who, while not living on farms, lived outside limits of any incorporated place. Further difference is due to fact that 1920, 1935, and 1945 censuses were taken in January, while 1930 and 1940 censuses were taken in April, when number of persons on farms is appreciably larger. For additional farm population data, see tables 12 and 49, pp. 11 and 42.
5 Cropland harvested, crop failure, cropland idle or fallow, and plowable pasture.
6 "Improved land"; figures nominally include land available for crops and land occupied by buildings, yards, and barnyards.
7 Value is of specified farm property, not all farm property.
8 1945 figure represents value of horses, mules, cattle, hogs, sheep, goats, and chickens; in addition 1940 figure includes value of poultry other than chickens, bees, and fur animals in captivity. For 1940 figures comparable with 1945, see table 675, p. 567. For items and age groups included for earlier years, see 1940 Census of Agriculture Reports, Vol. III; for figures comparable to 1945, see 1945 Census of Agriculture Reports, Vol. III.

Source: Department of Commerce, Bureau of the Census: Sixteenth Census Reports, Agriculture Vol. III, and 1945 Census of Agriculture, Vol. III.

No. 672.—LAND UTILIZATION—TREND IN THE UNITED STATES: 1880 TO 1945

[In millions of acres. Total farm and nonfarm land areas are for year indicated. Cropland and pasture acreages usually relate to preceding years. Total, all years, represents area measurement for 1940 Census. See also Historical Statistics, series F 25-36, where total for 1880-1935 represents area measurement for 1880 Census].

¹ Includes cotton pooled for account of producers.

Source: Department of Agriculture, Production and Marketing Administration,

Program recording purchases for foreign supply, placed in liquidation on July 1, 1946.

Not a purchase by CCC; transfer from Bureau of Animal Industry for disposition.

No. 700.—Farms—Number and Percent Distribution, by Type: 1940 and 1945'

[For 1940, farms were classified by type on basis of major (single largest) source of income in 1939. For 1945 (value refers to calendar year 1944), farms with value of products used by farm houshold exceeding total value of all farm products sold were classified as subsistence farms. All others were classified by type of product representing more than 50 percent of total sales; if no one source of income represented more than 50 percent of total sales, the farm was classified as "General"!

Figures for 1930 are for farm operator's family only.

Source of tables 700 and 701: Department of Commerce, Bureau of Census; 1945 Census of Agriculture, Vol II.

¹ Not available. 2 Not classified by type. 3 Not classified either by total value of farm products or by type. Figures for 1930 include nurseries, greenhouses, and apiaries.
4 Classified both by total value of farm products and by type. Figures for 1930 include farms operated in 1929 with no farm products sold or used by farm operator's family but exclude nurseries, greenhouses, and apiaries.
5 Value of maple strup and sugar included with forest products for 1940 and 1945; with crops for 1930.
6 Value of Irish and sweet potatoes included with all other crops (field crops), not with vegetables.
7 Figures for 1930 are for farm appearance for the products of the crops (field crops).

No. 710.—Fertilizer Consumption: 1880 to 1948:

[In thousands of tons of 2,000 pounds. Based on tag sales, records of Government officials, or estimates. Beginning 1935, figures include tonnage distributed by Agricultural Adjustment Administration and by Tennessee Valley Authority, data for the latter representing fiscal years ending June 30. Data for phosphate rock used in Illinois and Florida, available only since 1939, have been excluded from annual comparisons. In addition to tonnage for consumption, fertilizers and fertilizer materials produced in continental U.S. are exported to island represented. possessions]

Source of tables 712 and 713: Department of Agriculture, Farm Credit Administration; annual report, Statistics of Farmers' Marketing and Purchasing Cooperatives.

Marketing seasons overlap.

§ For years since about 1935, comprises members, contract members, and shareholders, but excludes patrons not in these categories.

§ Includes value of commodities sold or purchased for patrons and charges for rendering other essential services either in marketing or purchasing. Most duplication in value arising from intra-association transactions has been eliminated.

Data not available.
For Alaska and Hawaii, figures are for acres; for Puerto Rico, cuerdas. A cuerda is equivalent to 0.9712 acre.
Number of farms reported for 1930, 2,104; no other data available.

Source: Department of Commerce, Bureau of the Census; Sixteenth Census Reports, Agriculture, Territories and Possessions.

25. Agriculture—Production and Related Subjects

The data in this section are, for the most part, from the Bureau of the Census, Department of Commerce, and from various bureaus in the United States Department of Agriculture. In general, statistics for agriculture census years are from the Bureau of the Census. Estimates for intervening years, and adjustments, where necessary, to a January 1 basis are from the Bureau of Agricultural Economics, United States Department of Agriculture.

The most extensive of the current survey data are gathered by the Bureau of Agricultural Economics from questionnaires handled in cooperation with the Post Office Department through its rural mail carriers. These surveys obtain livestock data in June and December and crop acreage data in October. For each survey the rural carrier distributes 10 to 20 cards to farmers on his route. The farmer is asked to complete his questionnaire for his own farm and return the card to his mail box.

In the data prepared by the Bureau of Agricultural Economics, estimates of crop acreage and production for the census years are set up currently on available information. Later, if necessary, these data are revised to a level based largely on the census enumerations. The estimates for intercensal years are based on sample data obtained each year from individual reporters. This information is supplemented by other data, such as State assessors' enumerations of agricultural information, crop meter frontage measurements, reports of carlot shipments, warehouse receipts, local surveys, personal observations by field statisticians as well as reports from other sources having a knowledge of farming, agricultural production, and processing. Cotton acreage and production are also based on sample data and, in large measure, on ginning information gathered by the Bureau of the Census. Usually, all known sources of information pertaining to agriculture in general, from the farm to the consumer's household are tapped for basic facts used in compiling current statistics on agriculture.

For each decade from 1840 through 1900, the Census of Agriculture was taken as of June 1. The four decennial censuses since then have been taken as of April 15, 1910; January 1, 1920; April 1, 1930; and April 1, 1940. The 1925, 1935, and 1945 quinquennial Censuses of Agriculture were taken as of January 1. Comparison of inventory numbers of livestock from census to census is seriously affected by a change in the date of enumeration. From January to April there are material changes in numbers on hand in most parts of the country due to births, marketings, farm slaughter, etc. In an effort to obtain as much comparability as possible the 3 censuses taken in April either excluded recently born animals from the enumeration or provided for their enumeration in a separate age group. Volume II of the 1945 Census of Agriculture Reports shows a complete history of the enumeration of livestock and presents a discussion of the comparability from census to census.

For most kinds of domestic livestock, there are comparatively short, cyclic fluctuations in numbers, even though the trend over a long period of time may be definitely in one direction. A single census may be taken at a time when such a cycle is at the peak or at the trough of numbers and hence gives no true indication of the long-time trend.

Annual inventory numbers of livestock on farms prepared by the Department of Agriculture together with estimates of livestock, dairy, and poultry production are based on information furnished by individual farmers, supplemented by State assessors' data in a number of States, and by such records as brand inspections, rail and truck shipments, and inspected slaughter. The level for these inventories is based in large part on census enumerations for years when census data are available.

Information on prices received by farmers for products they sell and prices paid for articles they buy for production and family living are obtained from about 35,000 farmers, local merchants, and handlers of agricultural products. Season average prices received by farmers are calculated by weighting midmonth prices by monthly sales during the crop marketing season, beginning with the first month when a particular crop harvest begins.

The index numbers of prices received and of prices paid by farmers are based on current midmonth prices for these commodities. For information concerning methods of construction of the indexes, see Supplement No. 1 to the January 1950 issue of Agricultural Prices, issued by the Bureau of Agricultural Economics. The ratio of the index of prices received to the index of prices paid by farmers measures the monthly variation in the average per unit exchange value of farm products in terms of commodities and services bought by farmers. See tables 692 and 693, p. 582, for indexes of prices received and paid by farmers.

Data on imports and exports are now compiled by the Department of Commerce, Bureau of the Census, and are published in the annual report, Foreign Commerce and Navigation of the United States. (See section 31, Foreign Commerce.) The official trade statistics based on the fiscal year are usually preferable to data presented on a calendar year basis, for use in comparing imports and exports with crop production since, for most crops, they coincide more nearly with the crop year.

Historical statistics.—In this section, tabular headnotes (as "See also Historical Statistics, series E 72") provide cross-references, where applicable, to Historical Statistics of the United States, 1789-1945. In that historical supplement to the Statistical Abstract, statistics are carried back year by year as far as possible. See also the historical appendix of the present issue of the Abstract for specific titles of series and the earliest year shown in the supplement.

No. 715.—FARM PRODUCTION—INDEXES OF VOLUME, BY MAJOR GROUPS OF PRODUCTS: 1934 TO 1949

[1935-39=100. Indexes based on estimates of production for sale and for consumption in farm homes. Excludes products fed to livestock or used for seed. Calendar year production of livestock and livestock products is compared with crop production of same year. Commodities covered by index contributed shout 93 percent of gross farm income during 1935-39. See also Historical Statistics, series E 72, for index of all groups]

No. 716.—Acreage Losses—Estimated Acreages of Certain Crops Planted AND NOT HARVESTED: 1929 TO 1949

[In thousands of acres. Acreages for winter wheat represent acres sown preceding fall and not harvested, thus including considerable land subsequently planted to other crops. Acreages for cotton include more than 10 million acres plowed under in 1933. Totals do not show total crop losses chiefly because of large acreage of hay land which produced only pasturage in some dry seasons]

1 Excludes distilled liquor.

Source: Department of Agriculture, Office of Foreign Agricultural Relations; annual report, Agricultural Statistics. Based on data compiled by Department of Commerce, Bureau of the Census.

¹ Based on data for 122 agricultural imports cassifications.
² Supplementary agricultural imports consist of all imports similar to agricultural commodities produced commercially in the United States, together with all other agricultural imports interchangeable to any significant extent with such United States commodities. Complementary agricultural imports include all others, about 95 percent of which consist of rubber, coffee, raw silk, cacao beans, wool for carpets, bananas, teas, and spices.

Beginning Jan. 1, 1942, includes food exported for relief or charity; beginning Jan. 1, 1947, also includes exports under the Army Civilian Supply Program.
 Based on total exports of domestic merchandise.

Imports for consumption beginning with 1934; general imports prior thereto.

¹ Excludes 14,603,000 acres of corn cut for fodder, valued at \$206,935,000, probably duplicated in acreage of corn harvested for grain. 3,107,000 acres of mature crops hogged off (corn, velvetbeans, soybeans, peanuts, sweetpotatoes, etc.) also excluded.

1 Total acreage of crops for which figures are available.

3 Not available, or data not comparable.

4 Irish and sweet potatoes included with "field crops," not with "vegetables." Acreage of vegetables represents acres of vegetables harvested for sale only; acreage in farm gardens not available. Value includes both vegetables for home use and for sale.

5 Excludes acreage of not field, clover, and grass seeds harvested, probably duplicated in hay acreage.

7 Only strawberries reported in small fruits; other small fruits included in field crops.

8 Vegetables for sale.

9 Farm garden vegetables for home use only.

10 Acreage in fruit orchards, vineyards, and planted nut trees not secured prior to 1930.

11 Excludes acreage for horticultural specialties.

8 Source: Department of Commerce Rureau of the Commerce Acres of Acres and Acres acreage for Marcan of Acrea and Acres acrea and Acres acreage for horticultural specialties.

Horticultural specialties						129, 575	231, 259

cultural specialties.

Includes blackberries and dewberries, blueberries, boysenberries, loganberries, youngberries, raspberries, and straw berries.

Source: Department of Commerce, Bureau of the Census; 1945 Census of Agriculture, Vol. II.

¹ Irish potatoes and sweetpotatoes included with "field crops," not with "vegetables."
2 Excludes sweet corn, popcorn, "Egyptian corn," kafir, and milo maize.
3 Figures for 1944 are not fully comparable with those for 1939. 1944 totals are for States for which a separate inquiry was carried on schedule. For further discussion, see 1945 Census of Agriculture, Vol. II.
4 Oat hay included with small grains cut for hay.
5 Excludes flax and wheat mixture.
6 Clover seed except sweet clover.
7 Represents acreage of vegetables harvested for sale only; acreage in farm gardens not available.
8 Acreage of horticultural specialties not available for 1944 and therefore excluded for 1939; value includes horticultural specialties.

No. 725.—Agricultural Commodities—Production, by Chief Kinds: 1800 to 1949

[Figures refer to crop or growth year. Leaders indicate no data available. Weight of bushel of wheat, 60 pounds; bushel of corn, 56 pounds. See also *Historical Statistics*, series E 182 for corn, series E 187 for wheat, and series E 218 for cotton]

¹ Figures for 1800 to 1895 represent commercial movement, as given by Dan Talmage's Sons Co.

1 Figures for 1800 to 1895 represent commercial movement, as given by Dan Talmage's Sons Co.

2 Louisiana and Texas, 1809 to 1923; Louisiana only, 1924 to 1927; Louisiana and Florida, beginning 1928.

3 Data for linters included 1810-1865; excluded for subsequent years.

4 Beginning 1899, ginnings as reported by Bureau of Census. Figures for some years include small amounts of Baja California, Mexico, cotton ginned in United States. Round bales counted as half bales.

4 Gross weight. Figures prior to 1899 compiled by Bureau of Census from reports published by Department of Agriculture. See also note 11, table 726, p. 612.

5 Ergorts.

5 Figures for 1870 and 1880 represent estimated average production for 1863-71 and 1880-82, respectively.

8 Not yet available.

Source: Department of Agriculture, Bureau of Agricultural Economics, except as noted; annual report, Agricultural Statistics. Also published in annual crop reports.

No. 726.—Principal Crops—Acreage, Production, and Value: 1866 to 1949

[Tons are of 2,000 pounds. For weights of units of measurement for principal products, see Appendix II. Approximate weights of units of measurement for other products are as follows: Number of pounds to a bushlessweetpotatoes, 55; sorghums for grain, 56; clover seed, 60. Number of pounds to a barrel of cranberries, 100. Prices and yields for periods are weighted averages except for cotton and cottonseed, which are simple averages of prices and yields for individual years. Acreage, production, and yield of all crops revised to census data, See also Historical Statistics, series E 181-230, for acreage harvested, production, and price data for corn, wheat, oats, barley, flaxseed, potatoes, sweetpotatoes, cotton, cottonseed, soybeans, and hay]

¹ Values are based on season average or Dec. 1 prices. See notes on "Price" column.

² Received by farmers. Beginning 1908, prices are season average prices for the crop-marketing season; prior thereto, Dec. 1 prices. Prices for 1937 through 1944 for corn, 1938 through 1944 for wheat, and 1940 through 1944 for rye, include an allowance for unredeemed loans at average loan value.

No. 726.—Principal Crops—Acreage, Production, and Value: 1866 to 1949—Continued

¹ Values are based on season average or Dec. 1 prices. See notes on "Price" column.

4 Received by farmers. Beginning with 1908 for potatoes and cotton, 1909 for sweetpotatoes, and cottonseed, prices are season average prices. Figures for prior years are Dec. 1 prices. For 1933, 1934, 1937, 1938, and 1940 through 1949, season average prices for cotton crops include an allowance for unredeemed loans at average loan value.

4 Average for 8 years.

4 Average for 6 years.

4 Average for 7 years.

5 Average for 9 years.

6 Average for 6 years.

7 Average for 7 years.

9 Includes following quantities not harvested on account of market conditions (1,000 bushels): 1928, 7,462; 1931, 668; 1932, 2,175; 1939, 1,240; and 1943, 440. Price and value apply only to the harvested portion of the crop.

10 Includes 1,504,000 bushels unharvested but purchased by the Government under price support program.

11 State production figures, which conform with census annual ginning enumeration, with allowance for cross State ginnings, rounded to thousands and added for United States totals. Cotton grown in Baja, California, ginned in California from 1913 to 1924, has been excluded.

12 Production is in running bales prior to 1899; 500-pound gross weight bales thereafter.

1 Values are based on season average or Dec. 1 prices. See notes on "Price" column.

14 Received by farmers. Prices for 1942 through 1943 for sorghums and 1942 through 1944 for soybeans include an allowance for unredeemed loans at average loan value. See also notes on prices for each crop.

15 Resed on the reported price of grain sorghums.

an allowance for unredeemed loans at average loan value. See also notes on prices for each crop.

16 Based on the reported price of grain sorghums.

17 Prices are season average prices, prices of beans being for cleaned beans.

18 Average for 1929 and 1930.

19 Bags of 100 pounds (uncleaned).

19 Bags of 100 pounds (uncleaned).

10 Bags of 100 pounds (uncleaned).

10 Bags of 100 pounds (uncleaned).

11 Average for 1924 and 1925.

12 Dec. 1 prices, 1916 to 1931; beginning 1932, season average prices.

12 Includes 5,438,000 pounds in 1935, 4,365,000 pounds in 1937, 3,140,000 pounds in 1938, and 2,813,000 pounds in 1939, not available for marketing because of economic conditions and the marketing agreement allotments.

18 Prices and values are computed on the marketed crop.

19 Value of production obtaine by multiplying preliminary price by approximate quantity allocated to each State for marketing under Mark ing Agreement.

¹ Value based on season average or Dec. 1 prices. See notes on "Price" column.

20 Received by farmers. Prices as of Dec. 1 except as noted.

21 Tame hay only, prior to 1911.

22 Prices are season average prices beginning 1911; Dec. 1 prices theretofore.

23 Prices are season average prices beginning 1919; Dec. 1 prices theretofore.

24 Prior to 1942, data are for 7 States. Production figures include fruit consumed on farms, sold locally, and used for manufacturing, as well as that shipped; they exclude fruit which ripened on trees but was destroyed prior to picking. Figures relate to crop produced from bloom of year shown. In California, picking season usually extends from about Oct. 1 to Dec. 31 of following year. In other States, season begins about Oct. 1 and ends in early summer.

extends from about Oct. 1 to Dec. 31 of following year. In other States, season begins about Oct. 1 and Chas in early summer.

31 Prior to 1942, price of sweet sorghums for forage and hay.

22 Not content of boxes varies. In California and Arizona, approximate average is 77 lbs.; in other states, 90 lbs. Production includes following quantities donated to charity, unharvested, and/or eliminated on account of economic conditions (1,000 boxes): 1933, 977; 1934, 1,395; 1935, 614; 1936, 1,023; 1937, 1,204; 1938, 2,949; 1939, 1,236; 1940, 1,322; 1941, 762; 1942, 654; 1943, 830; 1944, 1,771; 1946, 731; 1946, 2,639; 1947, 1,503; 1948, 879. Price and value are computed on requiring error. computed on remaining crop.

³⁸ Season average returns to growers. Price and value apply to entire crop exclusive of that portion donated to charity, unharvested, and/or eliminated on account of market conditions. (See note 32.) Prices are equivalent packing-house-door returns for all methods of sale and are weighted by production to obtain U. S. averages.

24 Average for 1929 and 1930.

Source: Department of Agriculture, Bureau of Agricultural Economics; annual report, Agricultural Statistics, and annual summaries of crop statistics.

No. 727.—Corn—Acreage, Production, and Value, by States: 1938 to 1949

[Pounds per bushel, 56. Covers corn for all purposes, including hogged and silced corn and that cut and fed without removing ears, as well as that husked and snapped for grain. Prices are soason average prices received by farmers. See also *Historical Statistics*, E 181-183, for U. S. totals for acreage harvested, production, and price]

Stocks, June 30 5	210, 531	262, 444	234, 084	389, 099	100,088	83, 813	195, 991	307, 347

Prior to 1937 some new wheat included, thereafter only old-crop wheat.
 Estimated total based on Bureau of Census item, "In mills and mill elevators attached to mills," 1926-44.
 Imports include full duty wheat, wheat imported for feed and dutiable flour in terms of wheat.
 Not available prior to 1930.
 For individual items see supply, above.

Source: Department of Agriculture, Bureau of Agricultural Economics, except for imports which are from Bureau of Census. Published in annual report, Agricultural Statistics, and in The Wheat Situation.

No. 740.—Cotton and Cottonseed—Acreage, Production, and Value, by States: 1936 to 1949

[Cotton production excludes linters. Figures for production in some States differ slightly from census figures on ginnings due to ginnings in 1 State of cotton grown in another. Where figures are not shown for individual States, separate data are not available for entire period but are included in United States totals. Values shown are for marketing season or crop year and should not be confused with calendar year income. Yields and prices for periods are simple averages of figures for individual years. Tons are of 2,000 pounds. See also Historical Statistics, series E 217-224, for U. S. totals for acres harvested, production, and price]

No. 741.—Cotton—Production, Consumption, Exports, Imports, Prices, and Carry-Over: 1915 to 1949

[All figures, except average price, in thousands of bales. Production figures relate to crop of preceding calendar year and are compiled from reports of individual ginners. Price per pound is average price received by growers, For data prior to 1915, see 1949 and earlier editions of the Statistical Abstract]

Preliminary.
 Price of hay sold baled.
 Tons of 2,000 pounds.

Source: Department of Agriculture, Bureau of Agricultural Economics; annual summaries, Acreage, Yield, and Production of Principal Crops and Season Average Prices and Value of Production.

No. 747.-Truck Crops, Commercial-Acreage, Production, nd Value, by Kind, 1938 to 1949, and Leading States,

Includes only States with crop of commercial importance; for fresh market and processing combined. Approximate weights of units of measurements are as follows: Number pounds to crate—ssparagus, 30; cantaloupes, 70; caulidower, 37; celery, 66; (k-size catelors) morphylal melons, 70; broad-grade melons, 33; strawber-pounds to the bushel—earrots, 50; cucumbers, 48; eggplanti, 33; seazedo, 52; kale, 18; peppers, 25; potatoes, 60. Number pounds to box of artichokes, 40. Lettuce is in western crates (mostly 4 to 6 dozen heads), 70 pounds, 36-pound sacks; and galic, 100-pound sacks. Tons are of 2,000 pounds. Values based on average seasonal prices received by growers!

¹ Includes some quantities not harvested on account of economic conditions or scarcity of harvest labor or donated to charity.

² Season average prices, except citrus fruit prices, which are equivalent packing-house-door returns for all methods of sale.

Preliminary.
 Estimates refer to production of apples in commercial apple areas of each State and include fruit produced for sale to commercial processors, as well as that for sale for fresh consumption.

Data for 3 States.
 Data for 5 States; 7 States prior to 1942. See also table 726, p. 614.
 Net content of box varies. In California and Arizona approximate average is 77 pounds; in Florida and

other States, 90 pounds.

In California and Arizona approximate average is 65 pounds net; in Florida and other States, 80 pounds net.

About 79 pounds net.

4 Based on tonnage of cane used.

¹ Growth of 9 months in Louisiana and 12 months in Florida. Sugar campaign usually not ended before February in Louisiana and April in Florida, following season of growth of cane.

2 Calculated by the Agricultural Adjustment Administration method. (S. R. Scries 1, No. 1.)

3 Based on the ratio of 100 pounds of raw sugar to 93.46 pounds of refined sugar.

4 Not including sirup production. See table 751.

5 Includes price support payments of \$1.45 per ton in 1945. Excludes Government payments under Sugar Act of \$1.10 per ton in 1945, \$1.15 in 1946, \$1.17 in 1947, \$1.10 in 1948, and approximately \$1.19 in 1949.

Age of cane equals 18 to 22 months of growth.

2 See note 2, table 752.

3 One ton of raw sugar 96° test is assumed to be equivalent to .9346 ton of refined.

- 1 Includes Puerto Rico, Hawaii, Phil. Isls., and beginning 1910, Virgin Islands not shown separately.
 2 Beet sugar not converted to raw prior to 1909.
 3 For 1900 to 1906, shipments to United States.
 4 Statistics for 1874 to 1889 represents exports.
 5 Normal grinding season begins Oct. 1. In 1933, production was from grindings of Oct. 1, 1933, to Dec. 31, 1934; beginning 1934, from grindings of the next calendar year.
 5 Exports 1871 to 1911, production 1912 and subsequently. Includes production of muscovado and panocha, low grades of sugar mostly for domestic consumption.
 6 Less than 500 tons.
 7 One year only.

 8 Not available.

 9 Louisiana and Texas 1909 to 1923; Louisiana only 1924 to 1927; Louisiana and Florida beginning 1928.

¹ Data from Sugar Branch, Production and Marketing Administration.

Beginning 1939 includes mainland cane stocks and beginning 1940 includes raws for processing held by importers other than refiners.

Includes sugar used in manufacture of other commodities. 1935-41, exports (Department of Commerce, Foreign Commerce and Navigation); 1942-48, quantities delivered for export (Sugar Branch, Production and Marketing Administration).

 Data based on allocation audits and records kept by armed forces.
 Adjusted for changes in invisible stocks (estimated) held by manufacturers, wholesalers, and retailers. Civilian per capita consumption, 1941-48.
6 Includes shipments for civilian relief feeding.

¹ Overvalued, due to depreciation of Brazilian paper milreis. ² Average, July 1, 1915, to Dec. 31, 1920. ³ Represents civilian consumption per capita, calculation of which excludes amounts allotted to the military population and takes into account changes in stocks. Net imports per capita, including civilian population, and military population in the U. S. and abroad, were as follows: 1941, 16 86 pounds: 1942, 12,73; 1943, 16.03; 1944, 18.22; 1945, 19.31; 1946, 19.10; 1947, 17.30; 1948, 18.41; and 1949, 19.09. Stocks at end of year were: 1940, 467,198,832 pounds: 1941, 552,649,128; 1942, 197,488,068; 1943, 466,008,348; 1944, 550,003,608; 1945, 548,151,744; 1946, 511,908,120, 1947, 456,352,200; 1948, 490,079,408; and 1949, 533,072,280. Annual amounts accepted by the military were: 1941, 92,000,000 pounds: 1942, 267,000,000; 1943, 320,000,000; 1944, 451,000,000; 1945, 563,000,000; 1946, 15,000,000; 1947, 3,500,000; 1948, 22,258,000; and 1949, 88,785,000.

No. 759.—Tea—Net Imports: 1830 to 1949

[Quantity, except per capita, in thousands of pounds; value in thousands of dollars; per capita in pounds. Years ending June 30 through 1918; thereafter, calendar years. Beginning 1919, data relate to trade of continental United States only (see headnote, table 758); prior to that time the small trade between the United States and noncontiguous territories is not included]

No. 762.—Animal and Vegetable Fats and Oils—Production, Consumption, and Stocks: 1948 and 1949

[Data cover factory operations only, and therefore exclude considerable quantities of lard, tallow, and grease produced on farms and by local butcheries and small renderers, and quantities consumed and held in homes, hotels, restaurants, bakerics, and quantities consumed and held by painters, building contractors, garages, etc. Stocks include amounts held by and in transit to producers, factory consumers, and public storages, but exclude amounts held in private storages by retailers, wholesalers, and Jobbers. Additional data on consumption and stocks of raw materials, such as cottonseed, copra, corn germs, flavseed, soybeans, etc., and consumption data by process and end-use are contained in Facts for Industry Series M17-1 and M17-2]

[In thousands of pounds]

<sup>Data from peanut-oil producers were collected by U. S. Department of Agriculture.
Not collected separately in 1948. Comparability between years cannot be obtained by combining data for two items as reported for 1949, due to fact that unrefined material is used in producing refined product.
Included in "Other vegetable oils" to avoid disclosure of individual operations.
Data on production collected by U. S. Department of Agriculture.
Data not available.</sup>

Data not available.
 Held by wool scourers.
 Data from fish oil producers were collected by Fish and Wildlife Service, U. S. Department of the Interior.
 Included in "Other marine mammal oil."
 Not shown to avoid disclosure of individual operations.
 Winterized-deodorized oil, hydrogenated-deodorized oil and cooking and salad oil not included.
 Not collected separately in 1948. Comparability between years cannot be obtained by combining data for three items as reported for 1949, due to change in reporting procedure.
 Data collected by the Bureau of Internal Revenue.

No. 763.—Domestic Animals and Chickens on Farms—Number and Value, by Kind, and Farms Reporting: 1930 to 1945

[Data for 1930 and 1940 are as of Apr. 1, and for 1935 and 1945 as of Jan. 1. Difference in date of enumeration affects comparability. Total value of all livestock for which data were collected at each census is shown in table 671, p. 561. Available data for certain classes not shown in the table below are as follows: Turkeys over 3 months old. p. 561. Available data for certain classes not shown in the table below are as follows: Turkeys over 3 months old, 1935, 5,382,000, valued at \$11,668,000; turkeys over 4 months old, 1940, 4,362,000, valued at \$11,668,000; turkeys over 4 months old, 1940, 4,362,000, valued at \$7,462,000. Hives of bees (on farms and elsewhere), 1930, 3,108,000, valued at \$1,320,000; 1940, 2,277,000, valued at \$7,320,000. See also Historical Statistics, series E 117-126 and 171 for number of domestic animals and chickens]

No. 764.—Domestic Animals on Farms—Number and Value: 1880 to 1950

[For census years prior to 1910 and for Jan. 1 estimates by Dept. of Agriculture, animals of all ages are included except in figures for cattle and sheep, 1880 and 1890, which are nominally exclusive of calves and lambs, respectively. Difference in date of enumeration affects comparability of census figures for all classes and especially for swine. See also Historical Statistics, series E 117-126, and 152]

¹ Census figures for 1910 are for animals over 3½ months old; 1920, 1925, 1935, and 1945, animals of all ages; 1930 and 1940, animals over 3 months old.

and 1940, animals over 3 months old.

2 Census returns prior to 1900 represent "milch" cows; 1900, cows 2 years old and over kept for milk; 1910, dairy cows 2 years old and over on Jan. 1, as estimated; 1920 and 1925, dairy cows and heifers 2 years old and over; 1930 and 1940, cows and heifers 2 years old and over on Jan. 1 of census year, kept mainly for milk production.

3 Census figures for 1910 are for sheep and lambs over 3½ months old; 1920, 1925, 1935, and 1945, sheep and lambs of all ages; 1930 and 1940, sheep and lambs over 6 months old. Jan. 1 estimates are for stock sheep.

4 Census figures for 1910 are for hogs and pigs over 3½ months old; 1920, 1925, 1935, and 1945, hogs and pigs of all ages; 1930, hogs and pigs over 3 months old; 1940, hogs and pigs over 4 months old.

5 Value of animals specified in preceding columns.

Simple averages of monthly prices, except those for beef steers and hogs, which are weighted averages.
 Excludes Western steers.
 Good and choice grades.
 Bulk of sales.
 Slaughter ewes (culls excluded) and native lambs.
 Packer and shipper purchases 5 Packer and shipper purchases.

No. 771.—MEATS AND LARD—PRODUCTION, FOREIGN TRADE, AND CONSUMPTION BY KIND: 1940 TO 1948

[All quantities, except per capita, in millions of pounds of carcass weight equivalent. Edible byproducts are excluded. Production of pork excluding lard comprises weight of dressed hog carcass less head bones and less all carcass fat rendered into lard. Lard production represents rendered weight of lard, and lard exports represent rendered lard, including neutral lard. Federally inspected production omits production in Hawaii and Virgin Islands from 1940 to date. Uninspected production is made up of farm and retail slaughter and all wholesale slaughter that is not Federally inspected. Commercial exports include commercial shipments to territories; they do not include USDA exports and shipments for Lend-Lease, UNRRA or other claimants, nor do they include shipments for military civilian feeding or voluntary relief feeding. Civilian consumption is calculated from production and foreign trade, with an allowance for changes in stocks, and with deduction of military takings beginning 1941 and of deliveries to USDA from 1941 to 1947. See also Historical Statistics, series E 138, 142, 146, and 150 for total production of beef, veal, lamb and mutton, and pork]

Excludes farm butter and milk equivalent of whey butter.
 Excludes cottage, pot, and bakers' cheese.
 Excludes product made from skimmed milk.

³ Includes data for ice cream made by counter freezers and by other small retailers.

Source: Department of Agriculture, Bureau of Agricultural Economics; annual report, Production of Manufactured Dairy Products; also published in annual report, Agricultural Statistics.

Excludes cottage, pot, and bakers' cheese.
 Excludes product made from skimmed milk.
 Excludes milk equivalent of butter or concentrated milk used as sources of fat in icc cream. Beginning with 1943 includes ice milk and sherbet.

§ Includes dry cream, dry part-skim milk, and dry ice cream mix.

§ Includes milk equivalent of cream used in creamed cottage cheese.

Source: Department of Agriculture, Bureau of Agricultural Economics; annual report, Agricultural Statistics

No. 778.—Butter, Butterfat, and Cheese—Average Prices Received by Farmers and Wholesale Prices: 1936 to 1949

[In cents per pound. Local market prices are weighted averages for entire country. Wholesale prices are for 92-score creamery butter and American cheddar cheese, Wisconsin. See also *Historical Statistics*, series E 165-166, for wholesale prices of butter and cheese]

No. 785.—Wool—Production, Imports, and Exports: 1839 to 1949

[In thousands of pounds. Production, except census data, estimated and for calendar years; figures for 1909 and later years, revised estimates, based on 1945 census data. Pulled wool included beginning 1900 and probably included for 1870 to 1899, though exact basis of estimates for these years is not known. Figures for 1839, 1849, and 1859 include only fleece. Exports and imports for 1839 are for fiscal year ending Sept. 30; for 1849 and 1859, fiscal years ending June 30; subsequently, calendar years. Imports and foreign exports prior to 1914 and domestic exports for all years include hair of Angora goat, alpaca, and other like animals]

Selling price of Commodity Credit Corp.
 Wyo., Mont., Utah, Nev., Colo., N. Mex., eastern Oreg., and parts of Dakotas.
 Imports for consumption beginning with 1933; general Imports prior to 1933.
 Because of changes in tariff laws in 1922, much wool of kind formerly classifiable as "clothing" is now classified as "combing."
 Carpet excludes "not finer than 40's" beginning 1931.

¹ Scoured wool, plus greasy wool reduced to a scoured basis, assuming average yields varying with class, origin,

grade, and whether shorn or pulled.

2 Wool regarded as more or less suitable for apparel purposes; formerly "Combing and clothing."

3 Includes raw wool consumed on woolens and worsted systems only. Raw wool consumed on cotton and other systems and by felt and batting manufactures amounted to about 10 million pounds in 1946.

26. Forests and Forest Products

The Bureau of the Census, Department of Commerce, and the Forest Service, Department of Agriculture, are the principal Government agencies engaged in the collection and publication of statistics of forest land, forest industries, and forest products. The Forest Service, through its forest survey activities, is making an inventory of the forest resource and is measuring rates of forest growth and drain. A number of reports for surveyed areas have been published. A report based on a reappraisal of the Nation's forest situation made during 1945 and 1946 was published in 1948. Statistics from this report are shown in tables 791–794. Other publications of the Forest Service include data on stumpage and log prices, lumber consumption and distribution, lumber used in manufacture, and fire statistics. The Statistical Supplement to the Annual Report of the Chief of the Forest Service carries statistics of the administration of the national forests.

The Bureau of the Census, Department of Commerce, publishes information on forest industries and products in reports of the Census of Manufactures, in addition to annual reports of the Census of Forest Products. The Bureau of the Census also publishes statistics of foreign trade in forest products. Information on the domestic movement of forest products is reported by the Interstate Commerce Commission and the Association of American Railways.

The Bureau of Agricultural and Industrial Chemistry of the Department of Agriculture publishes annual reports of the production of naval stores.

The Bureau of Labor Statistics of the Department of Labor publishes statistics of wholesale, lumber prices monthly and annually.

The Timber Products and Pulp and Paper series of the Industry Reports, published by the Bureau of Foreign and Domestic Commerce in cooperation with other government agencies, carry forest products statistics which have been developed to meet current needs for information.

A number of forest products trade associations and trade journals collect and publish statistics of forest products, production, markets, shipments, inventories, etc.

The completeness and reliability of published statistics of forests and forest products vary considerably. The data for forest land area and stand are, of course, much more reliable for areas which have been surveyed than for those areas which have not been covered. Forest fire statistics for federal lands are considered much better than for private lands, though too much reliance should not be placed in any estimates of fire damage or causes of fires.

In the field of forest products, data for lumber production and other manufactured products such as veneer and plywood, pulp and paper, cooperage, naval stores, etc., are much more complete than for the primary forest products such as poles and piling, fuelwood, and fence posts. As explained in the headnotes to the following tables, however, the data for lumber production are subject to certain limitations because of incomplete coverage. Information for pulp and paper, and plywood, on the other hand, are believed to be practically complete. Statistics relating to average value of lumber sawed may be subject to some special limitations due to under representation of small mills.

Historical statistics.—In this section, tabular headnotes (as "See also Historical Statistics, series F 145-150") provide cross-references, where applicable, to Historical Statistics of the United States, 1789-1945. In that historical supplement to the Statistical Abstract, statistics are carried back year by year as far as possible. See also the historical appendix of the present issue of the Abstract for specific titles of series and the earliest year shown in the supplement.

etc.
In continental U. S. and Hawaii. Data reported to Forest Service by its field offices, cooperating agencies, other Government bureaus, and similar sources. Statistics on unprotected areas based on State estimates only.
Prior to 1939 forest area included total area needing protection. Beginning with 1939, this area included only forest area needing protection, which accounts for reduction in areas between 1938 and 1939.

No. 797.—National Forest and Other Abeas, by States and for Alaska and Puerto Rico: June 30, 1949

[Areas in acres; comprises national forests, purchase units, experimental areas, land utilization and other areas placed under Administration of Forest Service, but not given a national-forest status. See also Historical Statistics, series F 69-70, for gross area and area under Forest Service]

² Includes grazing trespass.

² Less than \$500.

No. 807.—Lumber—Production, by Kind of Wood, and Average Mill Value

[Data not strictly comparable because of incomplete coverage of numerous small mills in the East prior to 1942 and exclusion of mills cutting less than 50 M ft. b. m. for all years prior to 1942 except 1869–1909, and 1919. Exclusion of under 50 M class of mills would affect totals less than 1 percent as reflected by 1942 survey. Data for 1943-46 include estimates based on sample surveys. Small production quantities are subject to large sampling errors

[Quantities in millions of board feet; average mill value per 1,000 board feet]

¹ Data not available. 2 Includes 298,006,000 board feet of lumber not reported by kind of wood.
2 Includes 165,305,000 board feet of softwood lumber and 7,605,000 board feet of hardwood lumber sawed by
New England mills from timber salvaged from the hurricane of 1938.
4 Totals include species not shown separately.
5 Includes unspecified amount of fir.

⁶ Less than 500,000 board feet were reported. 7 Magnolia included in "Other hardwood."

Reported in thousands for 1932 and prior years and converted on basis of 800 shingles to the square.

Included in "All other."

Includes figures for cedar lumber.

² Data are not available.

⁴ Data not published to avoid disclosing operations of individual establishments.

Source: Department of Commerce, Bureau of the Census (in cooperation with Department of Agriculture, Forest Service, and Tennessee Valley Authority); reports of Census of Manufactures and annual report, Lumber, Lath, and Shingle Production, Facts for Industry Series M 13G.

No. 811.—LATH AND SHIN GLES—PRODUCTION: 1899 TO 1947

[Lath in thousands and shingles in squares. Shingles reported in thousands prior to 1933 and converted to squares on basis of 800 shingles to square. See headnote, table 807 for explanation of lack of comparability of statistics. Data for shingles reasonably comparable over a period of years, because of complete enumeration of Red Cedar Shingle Industry, this industry's production comprising over 90 percent of total shingle production]

YEAR (CALENDAR)	Lath	Shingles	YEAR (CALENDAR)	Lath	Shingles

Beginning 1914 includes screenings.
 Includes data for existing mills not classified as producers of pulp before 1940. In that year data for 6 mills not previously classified as producers of wood pulp were included for first time. For same reason, an additional mill was included in 1941, and 2 more added in 1943.
 Includes data for 25 existing mills not previously classified as producers of paper and paperboard.
 Includes estimated production of insulating board for 1 mill. Estimates were made on assumption that production of this mill was proportionately the same in 1941 and 1942 as in 1943.
 Preliminary.

New basis, see table 817; 1949, preliminary.
 Included in "Other States" to avoid disclosing data for individual establishments.
 Includes Tennessee.
 Data by States not available. Includes Maryland.

These processes represent recent developments; production for 1939 and earlier years only a small proportion of total.

Source: Figures for 1899 to 1932, Department of Commerce, Bureau of the Census; reports of Census of Manufactures. Figures for 1933 and subsequent years, Department of Agriculture, Bureau of Agricultural and Industrial Chemistry; Naval Stores Report on Turpentine and Rosin.

¹ Figures for turpentine and rosin from crude gum, beginning 1929-30, and from wood beginning 1933-34, relate to crop year ended Mar. 31. All other figures relate to calendar years.

² Figures compiled from data reported by establishments in Turpentine and Rosin industry.

³ Figures compiled from data reported by establishments in Wood-Distillation industry.

⁴ Not reported.

⁵ Includes, for 1909 and 1914, 366 barrels and 1,848 barrels respectively, of turpentine and, for 1914, 3,596 drums of rosin, reported by establishments engaged in manufacture of lumber and timber products.

⁶ Estimated by J. E. Lockwood; complete data not available. Figures include estimates of rosin produced from reclaimed gum, as follows: 1932-33, 26,720 drums; 1933-34, 28,048; 1934-35, 27,200.

⁷ Includes estimates by J. E. Lockwood for production of turpentine from steam-distilled wood.

⁸ Includes data for rosin produced from reclaimed gum: For 1935-36, 43,350 drums; 1936-37, 34,155; 1937-38, 21,017; 1933-39, 31,983; 1934-04, 31,414; 1940-41, 20,181; 1941-42, 19,765; 1942-43, 11,207; 1943-44, 9,824; 1944-45, 8,066; 1945-46, 8,538; 1946-47, 8,449; 1947-48, 4,345; 1948-49, 4,230.

⁹ Figures do not include data for rosin produced from reclaimed gum. See note 8.

27. Fisheries

The Fish and Wildlife Service, Branch of Commercial Fisheries in the Department of the Interior, conducts annual surveys for various statistical information on the fishery industries. These data are published in greater detail in publications of the Service and include data on the volume of the catch of individual species of fish and shellfish and their value, employment in the fisheries, quantity of gear operated, the number of fishing and transporting craft employed in the capture and transporting of fishery products, employment in wholesale and manufacturing establishments, and volume and value of the production of manufactured fishery products. In addition to the basic statistics on employment, yield, and the production of manufactured fishery products for individual States and various geographical sections, there are included in reports data on imports and exports of fishery commodities; landings by fishing craft at Boston, Gloucester, New Bedford, and on Cape Cod, Massachusetts; at Maine ports; and Seattle, Washington; shad fisheries of the Hudson and Potomac Rivers; alewife fishery in the Potomac; seed oyster fisheries; a review of the Pacific Coast halibut fishery; a statement on whaling operations by United States firms; data on the sponge fishery; and lists of firms producing various manufactured fishery products. These data are summarized in the Statistical Abstract. The more detailed information may be obtained from the Fish and Wildlife Service, Washington 25, D. C.

Historical statistics.—In this section, tabular headnotes (as "See also Historical Statistics, series F 166–192") provide cross-references, where applicable, to Historical Statistics of the United States, 1789–1945. In that historical supplement to the Statistical Abstract, statistics are carried back year by year as far as possible. See also the historical appendix of the present issue of the Abstract for specific titles of series and the earliest year shown in the supplement.

28. Mining and Mineral Products

This section summarizes the principal statistics relating to the mineral industries and mineral products. It includes not only the crude and prepared minerals associated with the mineral extraction, but also some of the finished products manufactured from minerals. Statistics relating to the manufacture of mineral products are also included in section 30, Manufactures. Additional information relating to the mineral industries and mineral products appear also in other sections of this Abstract such as the section on labor force, prices, foreign commerce, and others.

Most of the statistics in this section are from the Bureau of Mines and the Bureau of the Census, with additional material from other Government agencies such as the Bureau of Labor Statistics, Bureau of the Mint, and the Interstate Commerce Commission and from non-Government sources such as the Engineering and Mining Journal, American Metal Market, the Iron Age, and the American Gas Association. Data in this section cover the following areas unless otherwise indicated: Bureau of Mines production statistics, continental United States, and, for leading products, outlying areas; Bureau of Census statistics, continental United States; foreign trade statistics, the United States customs area, which includes Alaska, Hawaii, Puerto Rico, and for 1935 to 1939, the Virgin Islands.

Mineral statistics, with principal emphasis on commodity detail, have been collected annually or at more frequent intervals by the United States Geological Survey or by the Bureau of Mines since 1880. The principal statistics have been published annually through 1931 in Mineral Resources of the United States and thereafter in the Minerals Yearbook. Data available from Bureau of Mines publications include quantities and values of minerals produced, sold or used by producers, or shipped; quantities of minerals stocked; crude materials treated and prepared minerals recovered, by method of treatment; and mineral content of materials produced. Data on production are sometimes available by method of extraction. Shipments or sales of products are classified in many cases by grade, by end use, or by State of destination. The Bureau of Mines also collects and publishes separate data on employment and accidents. The number of workers and man-days or man-hours worked, as measures of exposure to accidents, are tabulated only for broad industry groups.

Censuses of mineral industries have been taken approximately every 10 years since The statistics are collected and published in the Census volumes in such a manner as to relate the statistics on the production of the various minerals as nearly as possible to data on employment, principal expenses, fuels and power consumed, and other information available only for each establishment as a whole. Each establishment is classified according to its most valuable product. The data are also collected and compiled in a manner to permit integration with other Census statistics such as for manufactures and wholesale and retail trade. Data are available on the number of operations, quantity and value of products, number of persons engaged (sometimes by department or type of work), principal expenses (wages, salaries, cost of supplies and materials, fuel, purchased electric energy, and work done on contract), horsepower of power equipment, and sometimes other items, such as man-hours, cost of buildings, machinery and equipment, number and type of power-loading machines, cost of drilling oil and gas wells, development work, and capital invested. statistics on many of the manufactured mineral products are also collected by the Bureau of the Census at monthly, quarterly, or annual intervals.

To avoid misinterpretation, it should be noted that the Ceasus of Mineral Industries statistics in table 837 relate to operations primarily engaged in extracting minerals and in such primary mineral-preparation activities (crushing, screening, washing, flotation, etc.) as are needed to render the minerals marketable. Many of the statistics collected by the Bureau of Mines represent products of operations beyond the limits covered by the Census of Mineral Industries. Value totals based on Bureau of Mines publications, as shown in tables 833 and 836, are not comparable with the Census value totals, as shown in table 837. Census values represent crude or prepared minerals f. o. b. the mine, well, or mineral-preparation plant. Bureau of Mines value totals include for most metallic products the value of ingot metal rather than the value of ores and concentrates and the value of such manufactured products as cement and lime rather than the value of the limestone used in producing them.

Historical statistics.—In this section, tabular headnotes (as "See also Historical Statistics, series G 1-5") provide cross-references, where applicable, to Historical Statistics of the United States, 1789-1945. In that historical supplement to the Statistical Abstract, statistics are carried back year by year as far as possible. See also the historical appendix of the present issue of the Abstract for specific titles of series and the earliest year shown in the supplement.

² Preliminary.

 ⁹⁹ percent tin, 1896-1919; Straits tin thereafter.
 Prices 1896 to 1929 for pure aluminum (No. 1 virgin 98-99 percent); beginning 1930, for 99 percent+virgin ingot.
 Flasks of 75 pounds prior to 1927; 76 thereafter.
 Prices 1896 to 1898 are for Lake copper.
 Data are for New York zinc.

Average for 1899 and 1900 only.
 Average, 1903-05; average for New York zinc 1901-05, 5.058 cents.

A verage for 4 years. Connecticut Valley.

FIGURE W.—VALUE_OF. MINERAL PRODUCTION: 1880 to 1948 [See table 833]

Source: Department of th Interior, Bureau of Mines.

No. 835.—Mineral Production—Value, by States and for Alaska: 1943 to 1948

[Sum of State totals in table below does not agree with total for United States given in tables 833 and 836 chiefly because (1) figures for certain of products included in United States total are not available by States of origin; (2) use of iron ore values in State totals and pig iron values in United States total; (3) use of mine figures for gold, silver, copper, lead, and zinc in State totals and mint and smelter figures in United States total; (4) inclusion of estimates in United States total for a few products for which no canvass has been conducted for many years and for which no estimate by States is made; and (5) use of natural gas values at wells in State totals and values at point of consumption in United States total]

[In thousands of dollars]

No. 836.—Mineral Products of the United States—Quantities and Values: 1930 to 1948

IShort tons are 2,000 pounds; long tons, 2,240 pounds. Data cover continental United States and, for leading products, outlying areas. Certain of the figures represent shipments rather than quantity mined, and some of the figures for 1948 are preliminary. Total values of metallic and nonnetallic products include figures which Bureau of Mines is not at liberty to publish and estimated figures for exist in products for which flats are not available. In some cases, neither quantity nor value ear be shown and those products are not listed her built in tors. On the other hand, values for certain products, such as coke, are excluded from totals to eliminate duplication, since values for certain products, such as coke, are excluded from totals to eliminate duplication, since values for products.

¹From both domestic and foreign ores. Beginning 1935, data represent antimonial lead produced at primary refineries from both primary and secondary sources, and sar not comparable with data for prior years; estimate of value of primary antimony and lead comparable with data for prior years; estimate of value of primary antimony and lead content of antimonial lead from domestic sources included in total value of metallic prod-

² Content of antimonial lead. Value of the antimony in antimonial lead excluded from total value.

³ Largely from foreign ore beginning 1935; value not included in total value.

⁴ Figures not available or Bureau of Mines not at liberty to publish them; value included in total value of metallic or nonmetallic products.

Represents dried bauxite equivalent.

Product from domestic ores only.

¹ Value does not include premiums paid miners by the Government. Total premiums for copper, lead, and zinc amounded to approximately \$79,000,000 in 1945, and \$21,000,000 in 1947. In addition, exploration premiums totaling \$6,214,000 were paid to miners from July 1, 1946, through Dec. 1, 1947, to encourage exploration and development of copper, lead, and zinc deposits.

According to Bureau of the Mint; valued at \$20.67+per ounce through 1930, at \$35 per ounce in 1935 and subsequent years.

Value not included in total value; see headnote.

10 Value calculated at nominal price, 27 cents per pound.

11 Figures not available. Value of products derived therefrom, or of raw materials used, is included elsewhere.

piete. Subsequently, there was no canvass; total for clay products is estimate by Bureau of Mines; no estimate was made for sand-lime briets. Value of clay products excludes values of pottery and refractories for 1940 and subsequent years. 14 Figures obtained through cooperation with Bureau of the Census, 1940 total for clay produsts is estimate based on figures issued by Bureau of the Census as somewhat incom-" According to Bureau of the Mint.

¹⁴ Beginning 1945, sold or used—includes value of clay used in cement and heavy clay products which is not included in total value.

¹⁶ Includes brown coal and lignite, and anthracite mined elsewhere than in Pennsyl-16 Quantities as reported by Department of the Interior, National Bituminous Coal

17 Gypsum mined: For 1940 and subsequent years, value of crude at mine; for earlier Division; values include selling expenses.

years, value as sold (crude and calcined).

If Figures cover fixed, year ending Juns 30 of year stated.

If Beginning 1947 includes compounds from raw sea water, well brines, sea-water bit terns, brucite, and serpentine only. Data for earlier years not quite comparable in that they are on a gross-weight basis and include some compounds made from a combination of sea water and dolomite and of well brines and dolomite. ²⁰ Beginning 1935, includes mica recovered by grinding mica schist; excluded in prior

¹¹ Includes sublimed blue lead, sublimed white lead, leaded zinc oxide, and zinc oxide except that in 1947-48 data for sublimed blue and white lead are excluded but value is metallic products.

21 Figures not available; value of iron ore sold for paint included in total value of non-

rears shown.

included in total value of nonmetallic products.

23 Value at point of consumption. 1947-48 data estimated " Figures not available.

¹⁷ Includes soapstone used as dimension stone. Beginning 1947, excludes limestone 28 Excludes production of sodium carbonate from Wyoming; values included in total 35 No canvass. Estimate of value included in total value of nonmetallic products.

23From copper, lead and zinc smelters and zinc roasters and from roasting of high-sulfide gold and silver concentrates. 60° Bannam brior to 1947.
35 figures exclude soapstone. For 1935 and thereafter, figures cover tale, 35 For 1930 figures exclude soapstone. pyrophyllite, and ground soapstone. Dimension soapstone is included in stone. Value of soapstone in 1930 is included in total value of nonmetallic products; Bureau of Mines not at liberty to publish figures. or cement and lime.

No. 837.—Mineral Industries—Summary for the United States: 1919, 1929. AND 1939

[Statistics cover producing operations only. In general, those for 1939 cover only those operations (or concerns producing crude petroleum, natural gas, and natural gasoline, and rendering oil- and gas-field services) for which total value of all products, reported principal expenses, cost of buildings, machinery, and equipment during year, or cost of drilling and equipping wells during year amounted to \$2,500 or more. For bituminous coal and lignite an output criterion of 1,000 tons of coal was substituted for value of all products. Statistics for common sand and gravel industry exclude data for operations that produce less than 15,000 tons of sand and gravel unless reported principal expenses or cost of buildings, machinery, and equipment during year amounted to \$15,000 or more. Statistics for 1929 cover, in general, only those "enterprises" for which total value of all products or cost of development work amounted to \$2,500 or more. Bituminous coal and lignite mines that produced less than 1,000 tons of coal and common sand and gravel operations that produced less than 25,000 tons of sand and gravel, were excluded. Statistics for 1919 exclude data for "enterprises" for which value of all products was less than \$5,000. Noncommercial production of stone and sand and gravel obtained from mines or quarries operated by governmental agencies, public utilities, or by construction companies or contractors producing wholly for their own use or on contract for governmental agencies is excluded for all years. For summary data from 1939 Census of Mineral Industries by type of mineral industry, see 1949 Statistical Abstract, table 854] dustry, see 1949 Statistical Abstract, table 854]

¹ Excludes statistics for common clay and shale, crude petroleum and natural gas, greensand, natural gasoline

Source: Dept. of Commerce, Bureau of the Census; reports of Census of Mineral Industries, 1939, Vol. I.

peat, potash, and rock salt industries, for comparability with 1929.

Excludes common clay and shale, common sand and gravel, glass-sand, foundry-sand, natural sodium compounds, peat, potash, and rock salt industries, and limestone mines and quarries operated in conjunction with cement and lime plants for comparability with 1919.

ement and lime plants for comparability with 1919.

Includes value of crude minerals produced, value added during year by preparation processes, receipts for services performed for other concerns, and value of electric energy generated and sold.

Represents statistics for skilled and unskilled employees who perform manual labor, use tools, operate machines, handle materials, and care for property. Average numbers of wage earners were derived by adding numbers reported for each month and dividing sums by 12.

Represents statistics for salaried employees at operations and at central and branch offices, including officers of corporations, managers, superintendents, and other supervisory personnel, responsible professional and technical employees, and clerical employees. Number of salaried employees represents number receiving pay on a representative or normal day or pay-roll period—for 1939, during normal pay-roll period ending nearest Oct. 14; for 1929, on Dec. 15 or nearest representative day. Salaries for 1929, on Dec. 14 or on nearest representative day; for 1919, on Dec. 15 or on nearest representative day. Salaries represent total amount paid to salaried employees during calendar year.

Represents statistics for proprietors and firm members at operations and at central and branch offices.
7 Census statistics not available.

⁸ For 1939 includes installation costs, which are excluded for 1929,

Statistics for 1939 and 1929 refer to equipment in use or available for use at end of year.
 Includes equipment, with rating of 8,865 horsepower, operated by purchased power other than electric energy.

No. 839.—Copper—Production, Exports, Imports, and Consumption: 1910 то 1948

[In short tons (2,000 pounds). Production figures for unrefined copper cover United States and Alaska. Output of copper from foreign crude materials also shown under refined copper production. Consumption as shown represents quantity withdrawn from total new supply on domestic account (apparent consumption) not actual consumption, largely because consumers' inventories are not taken into account. Over a period of years, however, apparent consumption data give a good indication of consumption trends]

No. 842.—Copper—Exports and Imports: 1891 to 1949

[Exports are those classed as "domestic" in foreign trade statistics but include copper smelted or refined in United States from imported ore or unrefined metal. Values include all forms of copper; quantities represent all copper except the small item, "Other manufactures." Copper content of exports of ore for years 1891-1915 and of imports for years 1891-1903 was estimated]

[Quantities in short tons (2,000 pounds); values in thousands of dollars]

No. 848.—Gold and Silver—Production in Continental United States, Alaska, Puerto Rico, and Philippine Islands: 1792 to 1948

Value of gold in terms of money, being at a fixed rate, is not shown in this table. Gold was valued at \$20.67+per fine troy ounce from 1837 until 1933. In 1933, however, various higher prices prevailed subsequently to Executive order of Aug. 29. Value of gold production for that year, as computed by Bureau of Mines, was \$65,338,000, including \$12,486,000 premium calculated at average weighted price (\$25.65 per ounce). On Jan. 31, 1934, legal value of gold was fixed at \$35 per fine ounce. Value given for silver is commercial value, except for 1921 to June 1923 and for 1934 and subsequent years (see footnotes 1 and 2), for which periods it has differed materially from coinage value. Excludes production of Philippine Islands after 1945. See also Historical Statistics, series G 118-121, for data excluding Puerto Rico and the Philippine Islands

[Figures are totals for period or for year]

¹ For 1921, 1922, and first half of 1923, price taken at figure of \$1 per ounce fixed by Pittman Act.

² Value 1934-37 calculated on basis of average amount per ounce returned to depositors of newly-mined domestic silver: 1934, \$0.64+ per fine ounce; 1935, \$0.71875; 1936, \$0.7745; 1937, \$0.7735. Value thereafter calculated on basis of amount per fine ounce returned to depositors of newly-mined domestic silver produced: In 1938, \$0.6464+; 1939, \$0.6787+; July 1, 1939-46, \$0.7111+; subsequent to July 1, 1946, \$0.905.

³ Not calculated.

⁴ Less than 500 ounces.

⁵ Excluded after 1945.

703 ZINC

No. 848.—Zinc—Production of Ore, by States, Smelter Production, and Primary Slab Zinc Available for Consumption: 1920 to 1948

[All quantity figures in short tons (2,000 pounds); values in thousands of dollars. Excess of mine production over smelter production is due chiefly to export of ore. See also Historical Statistics, series G 116 for smelter production of primary zinc]

ITEM	1920	1925	1930	1935	1940	1945	1947	1948
Mine production (recoverable zinc content of ore)	61, 073 24, 509 92, 169	710, 847 3, 666 30, 811 15, 619 118, 778 14, 794 57, 658 7, 411 89, 261	595, 425 815 36, 259 37, 649 74, 304 10, 811 26, 421 14, 584 97, 626	517, 903 3, 337 1, 202 31, 053 54, 110 7, 263 54, 781 15, 536 85, 708	665, 068 15, 456 5, 060 70, 601 57, 032 12, 703 52, 587 11, 833 91, 406	614, 358 40, 226 35, 773 83, 463 48, 394 22, 175 17, 403 21, 457 81, 392	637, 608 54, 644 38, 745 83, 069 41, 497 17, 074 45, 679 16, 970 76, 871	629, 977 54, 478 45, 164 86, 267 35, 577 6, 463 59, 0288 76, 332

¹ Values at New York prices through 1907; at St. Louis prices, 1908 to 1914; at average price of all grades, 1915 and later years.

2 Computed at yearly average of high and low monthly prices at New York.

3 Census year ended May 31.

4 Excludes premiums paid to miners by the Government.

Includes Virginia.
 From Mexico in 1935; from Mexico, Canada, Newfoundland, and Peru in 1940; and from Mexico, Canada, Australia, Peru, Newfoundland, Argentina, and Bolivia in 1945.
 Includes small quantity of secondary electrolytic zinc.
 Excludes premiums paid to miners by Government.
 Less than one-half of 1 ton.
 General imports.
 Not available.

Source of tables 848 and 849: Department of the Interior, Bureau of Mines: Minerals Yearbook.

No. 850.—Coal—Production, 1821 to 1948, and by States, 1926 to 1948

[Quantities in thousands of short tons (2,000 pounds); values in thousands of dollars. Figures relate to mines having an output of 1,000 tons or more a year for 1919, 1921, 1924 and subsequent years. Includes coal consumed at mines. Figures for anthracite relate to Pennsylvania output only; those for bituminous relate to continents. United States and Alasks. Bituminous coal includes lignite and small amounts of anthracite outside Pennsylvania. Comparatively little coal is held in stock at the mines. See also Historical Statistics, series G 13-18]

Not including fuel or bunker coal laden on vessels engaged in foreign trade.
 Including lignite, slack, and culm.
 Fiscal years ending June 30.
 A verage, July 1, 1905-Dec. 31, 1910.
 Not including data for coal laden on vessels on Great Lakes in 1906, 1907, and 1908.
 Imports for consumption, general imports prior to 1933.
 Effective January 1948, export data include shipments under Army Civilian Supply Program.

Figures for bituminous coal represent average value per ton less selling expense (Bur. of Mines series) prior to 1937; thereafter, average gross realization including selling expense (Bit. Coal Div. series).
 Based on total production as shown in table 850.
 Calculated at 303,5 working days in the anthracite field and 308 working days in the bituminous field.
 Of 2,000 pounds.
 Not available.
 1891.
 Average number of men working daily.

³ Association of American Railroads. Represents consumption by class I railways for all uses, including locomotive, powerhouse, shop, and station fuel. The I. C. C. reports that in 1948 consumption for all uses by class I line-haul railways, plus purchases for class II and class III railways, plus purchases by all switching and terminal companies combined, was 99,793, 401 tons of bituminous coal and lignite.

⁴ Includes small amount of anthracite.

⁵ Retirects based was wearts called the many selected list of representative manufacturing plants and retail.

⁵ Estimates based upon reports collected from a selected list of representative manufacturing plants and retail calers.

⁶ Included in "Other industrials." dealers.

¹ Formerly designated "strikes and lockouts."

2 Wages and hours were important issues also in some of these disputes. This is especially true in recent years.

3 Includes some duplication (where same workers were involved in more than 1 stoppage). This is particularly significant in 1949, since over 60,000 anthracite miners and over 300,000 bituminous coal miners were involved. in 3 separate stoppages during year.

2 Preliminary.
3 Includes States not shown separately.

Source: Department of the Interior, Bureau of Mines; Minerals Yearbook.

Estimated.
Beginning 1947, includes gas stored and lost in transmission.
Beginning 1947, value at wells.

⁴ Includes gas stored and lost in transmission.

^{*} Includes 685,000,000 cubic feet piped to Mexico in 1940, 3,281,000,000 in 1945, and 3,077,000,000 in 1947.

Includes 107,000,000 cubic feet piped to Canada in 1930, 29,000,000 in 1935, 54,000,000 in 1940, 31,000,000 in 1945, and 28,000,000 in 1947.

Includes 44,000,000 cubic feet piped to Canada in 1935, 36,000,000 in 1940, 160,000,000 in 1945, and 179,000,000

in 1947.

S Includes 1,691,000,000 cubic feet piped to Mexico in 1930, 6,727,000,000 in 1935, 4,788,000,000 in 1940, 14,735,000,000 in 1945, and 14,865,000,000 in 1947.

S Includes Utah and Colorado.

¹ As billed by the shipper.

Represents difference between quantities shipped and receipts.

Represents distillates except gas oils and diesel oils.

Represents residual fuel oils except gas oils and diesel oils.

Lubricating-oil base stocks are probably included with lubricating oils.

Lubricating-oil base stocks are probably included with lubricating oils.

Includes propane, butane, propane-butane mixtures, pentane, and other liquefied refinery gases.

Receipts exclude liquefied petroleum gases from natural-gasoline plants.

Other finished products include still gas, residuum or tar, acid oil, and other refinery products.

29. Construction and Housing

Construction.—Monthly estimates of the value of work put in place are probably the most widely used of the current Federal statistics on construction. These estimates are prepared jointly by the Department of Commerce and the Bureau of Labor Statistics. Estimates of private nonresidential construction activity are primarily the responsibility of the Department of Commerce. Publicly financed construction of all types and housing construction activity are primarily the responsibilities of the Bureau of Labor Statistics.

Estimates of privately financed nonresidential construction such as stores, warehouses, and factories are based primarily on F. W. Dodge Corporation reports of construction contracts awarded, supplemented by building permit data for States which the Dodge Corp. does not cover. Public utility construction estimates are derived from data reported by the Interstate Commerce Commission and other Federal regulatory agencies, and by private associations such as the American Gas Association and the American Transit Association.

A considerable number of Federal agencies administer construction programs or award contracts for construction; some of them engage in construction themselves. In this field, construction activity data are derived by the Bureau of Labor Statistics from the reports of the respective Federal agencies. Data on other State and local governmental construction activity are obtained from F. W. Dodge Corporation and Engineering News Record reports.

Estimates of residential construction activity, including number of housing units started, average construction costs, and number of units per structure, are based primarily upon reports of building permits granted which are received from approximately 4,000 permit-granting authorities. Field surveys on a sample basis are used to obtain data on construction activity in nonpermit areas. Sample field surveys are also conducted in permit areas to determine such factors as the proportion of permits allowed to lapse, the time lag between the grant of the permit and the date of start, the relationship between permit valuation and contract valuation, and the length of the building period. During 1946 and 1947 these national figures on housing units started and on average construction costs were supplemented by national data on units completed and by corresponding data for each of 60 local areas. The current program of the Bureau of Labor Statistics provides monthly estimates of the number of housing starts in the nation as a whole, but the series on completions and the local area data have been discontinued.

The Bureau of the Census has taken a Census of Construction for 1929, 1935, and 1939. The last census covered all persons or establishments whose principal business in 1939 was utilizing construction materials and labor in construction work for others, or for themselves for speculative and investment purposes on projects located within the limits of continental United States. Because the Census excluded force account work, its coverage was substantially less than current estimates of value of work put in place.

Housing.—The first national Census of Housing was taken in 1940 by the Bureau of the Census as part of the Sixteenth Decennial Census and provided comprehensive data on housing characteristics. (See tables 896-906, 908.) In contrast, collection of current statistics on housing places emphasis upon data directed toward the administrative needs of specific programs. Data on housing characteristics, roughly comparable to those collected in the 1940 Census of Housing, were collected in April 1947 and May 1948 by the Bureau of the Census in its current population survey.

Data on home mortgages and foreclosures are provided by the Home Loan Bank Board. The Federal Housing Administration compiles data on its real estate financial operations, such as volume of mortgages insured, type of lending institution, etc.

Historical statistics.—In this section, tabular headnotes (as "See also Historical Statistics, series H 1-25") provide cross-references, where applicable, to Historical Statistics of the United States, 1789-1945. In that historical supplement to the Statistical Abstract, statistics are carried back year by year as far as possible. See also the historical appendix of the present issue of the Abstract for specific titles of series and the earliest year shown in the supplement.

No. 876.—Construction in the United States—Estimated Expenditures for Private and Public Construction: 1932 to 1949

[Represents value of work put-in-place during year; consequently differs from building permit and construction contract data which measure value of work started. In addition, coverage generally broader than permit and contract data. Includes value and cost of installation of equipment which is integral part of structure, but not that of machinery, shipbuilding, or land costs. See also *Historical Statistics*, series H 1-25. Revisions of these statistics by Office of Domestic Commerce were in process at time this table was sent to press]

[In millions of dollars]

Estimates of new private nonfarm residential construction prepared by Bureau of Labor Statistics.
 Public industrial building not separable from private construction in 1932.

Source: Estimates of new construction for 1939-49 are joint estimates of Dept. of Commerce, Office of Domestic Commerce, and Dept. of Labor, Bureau of Labor Statistics; other data except as indicated in note 1, are estimates of Office of Domestic Commerce. Current estimates are published monthly in the Industry Report on Construction and Construction Materials and in the Survey of Current Business.

No. 877.—Building Construction in All Urban Areas—Value, by Class of Construction and by Source of Funds: 1948 and 1949

[In thousands of dollars. Compiled from estimates of construction costs made by prospective builders when applying for permits to build and value of contracts awarded by Federal Government. Covers entire urban area of United States which includes all incorporated places of 2,500 or more in 1940 and, by special rule, a small number of unincorporated civil divisions]

¹ Exclusive of hangars and other buildings.

³ Includes multifamily dwellings with stores.

Source: Department of Labor, Bureau of Labor Statistics; annual and current data are published in the monthly pamphlet, Construction, in monthly releases, and in the Monthly Labor Review.

¹ Included in miscellaneous.

³ Includes nonresidential construction at site of 3 Resettlement Administration projects for which breakdown of residential and nonresidential costs is not available.

Excludes loans granted by Rural Electrification Administration.
Includes work under jurisdiction of Bureau of Public Roads.

Includes forestry and railroad construction and repair projects.

Source: Department of Labor, Bureau of Labor Statistics; current data published in Monthly Labor Review.

No. 879 .- New Permanent Dwelling Units Started in Nonfarm Areas, ву Турк: 1920 то 1949

[Figures are estimates covering construction of all new permanent family dwelling units in nonfarm area of United States, based upon building-permit reports, and from 1946, on building-permit information, supplemented by data from field surveys in non-permit-issuing places. This area consists of all urban and rural nonfarm places. Urban designation is applied to all incorporated places with a population of 2,500 or more in 1940, and, by special rule, to a small number of unincorporated vil divisions. Rural nonfarm construction includes all construction for nonsgircultural use in unincorporated areas and incorporated places of less than 2,500 population. Hence, urban construction is classified by location, whereas rural nonfarm construction is classified according to the intended use of individual buildings. The series published formerly in the Statistical Abstract included temporary as well as permanent dwelling units from 1941. The official series of the Bureau of Labor Statistics now excludes temporary units, as such units do not add to the country's lasting inventory of housing. See also Historical Statistics, series H 40-45; data for 1941-1945 presented here do not agree with those shown in historical volume because the latter include temporary units for those years]

¹ Urban and rural nonfarm classification for years 1920-29 are based on 1930 Census; for years 1930-49, on 1940 Census.

Includes 1- and 2-family dwellings with stores.

Includes multifamily dwellings with stores.

Source: 1920-29, National Bureau of Economic Research; 1930 and later years, Department of Labor, Bureau of Labor Statistics. Annual and current data are published in monthly releases and in the monthly pamphlet, Construction.

No. 880.—Construction Contracts Awarded in 37 States—Value of Construction and Floor Space of Buildings, by Class of Construction: 1927 to 1949

[For State figures, see table 881. Public works and public utilities cover some projects not measurable in terms of floor space, such as highways, pipe lines, subways, etc. Statistics for the 37 States were not compiled for years prior to 1925, but available figures covering a varying number of States for earlier years have been published in the 1932 and previous issues of the Statistical Abstract. Figures for the individual States and districts in table 881 represent the value of construction contracts awarded in the States and districts where the work was actually done. See also Historical Statistics, series H 51-57]

[Values in millions of dollars; floor space in thousands of square feet]

¹ Data for airports now included with "Public utilities"; prior to 1930, included with "Commercial."

² Data for pipe lines now included with "Public utilities"; prior to 1929, included with "Manufacturing buildings."

³ Excludes data for 23 Civil Works Program projects, valued at \$29,551,900, not available by class of construction.

No. 882.—Construction Contracts Awarded—Indexes of Value: 1920 to 1949

[1923-25 average=100. Indexes are derived from monthly figures of construction contracts awarded reported by F. W. Dodge Corporation. Reports covered 37 States beginning with May 1924 and a varying number for earlier years. In order to obtain comparable figures from 1919 to date, total value of construction contracts awarded in 37 States was estimated for January 1919 through April 1924. Seasonal adjustments computed separately for "residential" and "all other" types of construction and the two series combined. Indexes based on a 3-month moving average, centered at middle month. For more detailed description of indexes, see Federal Reserve Bulletin for July 1931]

No. 883.—Engineering Construction Contracts Awarded—Volume, by Type: 1927 to 1949

[In millions of dollars. Covers continental U. S. construction projects of following minimum costs through 1945 (except for 1932-35): Waterworks, excavation, drainage, and irrigation, \$15,000; other public works, \$25,000; industrial buildings, \$40,000; other buildings, \$150,000. For 1946, these minimums were raised to \$22,500, \$40,000, \$55,000, and \$250,000, respectively, to account for rise in construction costs. For 1947-49, minimums used were: \$28,000, \$50,000, \$68,000, and \$250,000. For 1932-35, minimums used were: \$10,500, \$17,500, \$28,000, and \$105,000]

Preliminary.
 Classified as urban under special rule by Bureau of the Census, 1940.
 Figures represent applications filed.
 Excludes data for July and August.
 Not available.
 Excludes data for April.
 Represents work actually started, based on inspection records.
 Excludes data for February and October.

¹ American Appraisal Co. Average for 30 cities of 4 types of buildings: Wood frame, brick-wood frame, brick-steel frame, reinforced concrete. Mechanicals not included. Based on actual appraisal costs. Available for individual cities.

steel frame, reinforced concrete. Mechanicals not included. Based on actual appraisal costs. Available for individual cities.

Associated General Contractors of America. Wages and materials for 12 cities combined in 40-60 ratio. Wages, prevailing rates for hod carriers and common labor. Materials, weighted: Sand, gravel and crushed stone, 1; cement, 1; lumber, 1; hollow tile, ½; structural and reinforcing steel, ½.

Engineering News Record construction cost index has 4 components: (1) Structural steel shapes, base price; (2) cement at Chicago; (3) lumber, which until 1935 was 12 x 12 long leaf yellow plne wholesale at New York, and since 1936 is 2 x 4 878 pine and fir in carload lots, ENR 20-cities average; (4) common labor. ENR 20-cities average; of wage rates in force. ENR Building Cost index provides a more representative measure of building cost movement, the skilled labor trend having been substituted for the common labor trend in the ENR Construction Cost index, and the ENR Building Cost index computed.

4E. H. Boeckh & Assoc., Inc. Individual series for 10 types of buildings for 20 areas. Weights based on studies of actual building costs—vary with different type of structures. Material prices are those paid by contractors to material dealers. Prevailing skilled and common wage rates from contractors. Base: United States average, 1926-29-100. Series given here is commercial and factory buildings, U.S. average converted to 1913=100 base.

Aberthaw. Until Mar. 31, 1946, New England, 7-story and basement (62' 4'' x 202' 4''), reinforced concrete building built in 1914, repriced quarterly as a construction bid to duplicate original building; labor costs based on current experience with similar construction. Since Mar. 31, 1946, New England, composite of 36 major cost items in 3 multi-story and 2 one-story industrial buildings, including all mechanical trades, repriced using actual and estimated labor and material costs.

George A. Fuller Company. Composite of 36 major cost elements, in 3 commercial type build

No. 887.—Construction—Summary, by Kind of Contractor, by Size Groups: 1939

The 1939 Census of Construction covered all persons or establishments whose principal business in 1939 was utilizing construction materials and labor in construction work for others, or for themselves for speculative and investment purposes, on projects located within the limits of continental United States. It included erection and installation departments of manufacturers and merchandisers, when it was an important but not necessarily major portion of their business enterprise. Force-account work, ship and boat building, and installation and servicing of domestic appliances were not included. "Work performed" represents contract or order value of work done by the contractor's or builder's own forces. Work sublet to others was not included as work performed in the report of the builder or general contractor, but was reported as part of the business of the special trade contractor who received the subcontract. "Construction work" includes alterations and repairs, as well as new construction and additions. Data for establishments reporting less than \$500 of work performed in 1939 are not included. The canvass is known to have been incomplete in coverage of small contractors who operated from their homes. Most of this shortage occurred in metropolitan districts. It is believed that this undercoverage affects materially only number of establishments and number of proprietors]

Deferred—U. S. Housing Act	9, 345	-11, 576	9, 345	

This veterans' housing is so classified even though title or income rights may not yet be formally transferred.
 Includes 1,423 rural units not yet built but which are parts of active rural projects.
 Reflects reclassification to Public Law 171 of Public Law 412 projects built under McCarthy Act.

Source: Housing and Home Finance Agency, Public Housing Administration; Annual Report.

Includes PWA, Subsistence Homestead and Greenbelt Town projects.
 Includes 50 PWA units completed in 1934.
 Includes 60,489 units completed as war housing of which all but 1,400 units have been returned to low-rent use.
 Units completed for emergency flood projects in Portland-Vancouver area.

No. 891.—Number of Active Projects and Dwelling Units, Owned or Supervised by the Public Housing Administration, by State or Other Area, as of Dec. 31, 1949

No. 897.—Occupied Dwelling Units or Families—Tenure: 1890 to 1940

[1940 figures based on occupied dwelling units; not strictly comparable with data for private families, but differences are negligible. Figures for 1900 and 1930 represent private families only; those for 1890, 1910, and 1920 include small number of quasi-family groups. For 1947 data, see table 895]

No. 899.—Dwelling Units, Urban and Rural—Estimated Total Monthly Rent and Estimated Total Value: 1940

[For urban and rural-nonfarm units, monthly rent and value include land; for farm units, farm land is excluded. Monthly rent all data include contract rent of tenant-occupied nonfarm units and estimated rent of other units. Monthly rent of covner-occupied rural-farm units is an estimate based on 1 percent of reported value. Value of owner-occupied units represents the owners' estimate of the value. For tenant-occupied and vacant units value was estimated as 100 times the monthly rent. Value or rent of units for which these data were not reported was estimated by assuming that the average value or rent of such units was the same as the value or reporting units in the corresponding tenure and occupancy group of the urban and rural areas of each region]

[In thousands]

No. 904.—Dwelling Units, Urban and Rural-Nonfarm—Median Rent, Median Value, and Mortgage Status, by Tenure, by States: 1940

[Median defined: That item which is in the middle of a series arranged according to size. Thus, the median rent is the rent which divides the total number of dwelling units into two equal groups, one having rents higher than the median and one having rents lower than the median]

¹ Includes contract rent of tenant occupied units and estimated rent of owner-occupied and vacant units.

³ Mortgage data are limited to owner-occupied nonfarm units in structures without business and containing not more than 4 dwelling units; percent represents percent of reporting owner-occupied units which were mortgaged. For number of owner-occupied urban and rural-nonfarm units, see table 903.

30. Manufactures

Census of Manufactures.—The basic source of comprehensive data on manufacturing production is the Census of Manufactures conducted by the Bureau of the Census. The first Census of Manufactures covered the year 1809 and a census was taken at 10-year intervals in connection with the Decennial Census of Population up to and including 1899, with the exception of 1829. It was conducted at 5-year intervals from 1904 through 1919, and every other year from 1921 through 1939, but was suspended during the war period. The 1947 Census of Manufactures is the first to be taken since 1939. Present legislation provides for a Census of Manufactures to cover the year 1953 and every fifth year thereafter.

The 1947 Census of Manufactures covered all establishments primarily engaged in manufacturing, as defined in the 1945 revision of the Standard Industrial Classification sponsored by the Bureau of the Budget. To the extent possible, this Census was conducted on an establishment basis. As a rule, the term "establishment" signifies a single plant or factory and is not necessarily identical with the business unit or company which may consist of one or more establishments. A company operating establishments at more than one location is required to submit a report for each location; also, companies engaged in distinctly different lines of activity at one location are required to submit separate reports if separate pay roll and inventory records are kept for each activity. Census figures differ, therefore, from those prepared on a company basis. They also differ to some extent from other tabulations based on establishment reports, where the definition of an establishment as to location and line of activity is not so rigidly applied.

In the 1947 census, reports were required from all establishments employing one or more persons at any time during the census year. In other recent censuses, establishments having less than \$5,000 value of products were designated as out of the scope of the census. The change in the minimum size limit in 1947 as compared with 1939 has not appreciably affected the comparability of the figures for these two years, except for data on number of establishments for a few industries.

Each of the establishments covered in the census was classified in one of 458 manufacturing industries in accordance with the industry definitions embodied in the Standard Industrial Classification system. Under this system of classification, an industry is generally defined as a group of establishments producing a single product or a more or less closely related group of products. This product or group of products is in turn said to be "primary" to that industry. Accordingly, an establishment is classified in a particular industry if its production of the primary products of that industry exceeds in value its production of any other group of products. In a few instances, however, the industry classification of an establishment is determined not only by the products it makes but also by the processes employed in making those products.

While some establishments produce only the primary products of the industry in which they are classified, it rarely happens that all the establishments in an industry specialize to this extent. The statistics on employment, pay rolls, value added, inventories, and expenditures, therefore, reflect not only the primary activities of the establishments in that industry but also their activities of a secondary nature. For this reason the industry statistics usually cannot be directly related to statistics on the total shipments of commodities.

Comparative figures shown for 1939 are generally slightly lower than those published in the 1939 reports. The 1939 figures have been revised to exclude retail bakeries, machine-shop repairs, and some other types of establishments also omitted from the 1947 census. Cost of materials and value of products for 1947 were not compiled for summary tables because of the duplication which arises in the combination of individual industries representing successive stages in the production of finished manufactures.

The Bureau of the Census is prohibited by law from publishing any statistics that disclose information reported by individual companies. Figures are, therefore, not shown for an industry or a geographic unit which is represented by only one or two companies, or by more companies when one or two companies produce a very large proportion of the combined output of all the companies. This restriction has no effect upon statistics by industry for the entire United States, or statistics for all industries within States and standard metropolitan areas. There are many instances, however, where this restriction makes it necessary to withhold figures for counties and cities, and for industries within States and areas.

Current and other statistics.—Monthly, quarterly, and annual commodity surveys are also conducted by the Bureau of the Census. These data are published currently in the Facts for Industry series. This series also includes releases of information collected by or for the War Production Board and successor agencies during the war and reconversion periods by the Census Bureau or other Federal agencies.

Reports on current activities of industries, or current movements of individual commodities, are also compiled by trade associations and trade journals, commercial agencies, and by such governmental bureaus as Labor Statistics, Agricultural Economics, Foreign and Domestic Commerce, Fish and Wildlife Service, Tariff Commission, and Internal Revenue, in addition to the Census Bureau previously mentioned.

Abbreviated balance sheet and income account data on all United States manufacturing corporations are compiled and published annually by the Bureau of Internal Revenue from corporation income and profits tax returns and holding company returns.

Data on financial operations and intercorporate relations of manufacturing corporations are collected from time to time by the Securities and Exchange Commission, the Tariff Commission, the Federal Trade Commission, and special investigating Financial statistics for certain manufacturing industries in the form of balance sheets, profit and loss statements, analyses of sales and expenses, lists of subsidiaries, types and amounts of security issues, and selected data on the salaries paid to officers and directors, are summarized and published for the leading corporations that are registered with the Securities and Exchange Commission. The Tariff Commission publishes commodity surveys which cover economic and competitive aspects of production, distribution, and international trade in selected important industries. survey deals with several products which are related because of the raw materials con-The Federal Trade Commission has made several comsumed, or competitive uses. prehensive studies of individual industries. Studies of individual industries have also been made by trade associations and private research agencies.

Material in other sections.—In addition to the statistics presented in this section, statistics on the output and activities of manufacturers will be found in various other sections of the Statistical Abstract. For example, data on wages and hours appear in section 8, Labor Force, Employment, and Earnings; statistics on manufacturing corporations compiled from corporation income tax returns appear in section 14, Federal Government Finances, and in section 17, Business Enterprise; and statistics on lumber production in section 26, Forests and Forest Products. For page references to the commodity or industry, consult the index. For references to the important sources of statistics on manufacturing and related activities, see the listings under the appropriate subjects in the "Bibliography of Sources of Statistical Data," page 970.

Geographic coverage.—Statistics in this section relate to continental United States except as noted.

Historical statistics.—In this section, tabular headnotes (as "See also Historical Statistics, series J 30-48") provide cross-references, where applicable, to Historical Statistics of the United States, 1789-1945. In that historical supplement to the Statistical Abstract, statistics are carried back year by year as far as possible. See also the historical appendix of the present issue of the Abstract for specific titles of series and the earliest year shown in the supplement.

No. 909.—Manufactures—Summary: 1849 to 1947

[Figures for 1849 to 1919 include establishments whose products were valued at \$500 or more; for 1921 to 1939, establishments whose products were valued at \$5,000 or more; for 1947, figures cover all establishments employing 1 or more persons at any time during year. For basis of revisions beginning 1889, see General Explanations, Sec. 13 in source volumes, "Statistics for 1939 and earlier years." See also 1948 Abstract and Historical Statistics, series J 1–12, for unrevised data for 1939 and earlier years]

¹ Because of change from \$500 to \$5,000 in minimum-value-of-products limit, "Number of establishments reporting power equipment" figures for 1919 and earlier years are not comparable with those for 1929 and 1939. This change did not, however, materially impair comparableness of figures for other items in this table.

² Returns for "Logging camps and logging contractors (not operating mills)," numbering 967, were excluded from power tabulations.

reported separately.

Includes data for water motors. 8 Not available.

off power tabulators.

3 Includes 47,192 horsepower reported as other owned power, not distributed by type of prime mover.

4 Includes 28,213 horsepower reported as other owned power, not distributed by type of prime mover.

4 Figures for "Steam engines" include data for "Steam turbines," not reported separately.

5 Figures for "Other internal-combustion engines" include data for "Diesel and semi-Diesel engines," not

No. 914.—Industrial Power Requirements of Manufacturing and Extracting Industries: 1939 to 1946

[Based on reports filed by more than 5,000 manufacturing, industrial, and other establishments consuming over 85 percent of the total energy used by such establishments. Use for 1946 was estimated. Data have been adjusted to census coverage based on 1939 Census of Manufactures and 1939 Census of Mineral Industries]

[In millions of kilowatt-hours]

¹1947 statistics, compiled by Bureau of Census from Census of Manufactures, show a total for manufacturing industries of 140,947 million kilowatt-hours. Adding estimates for government and extracting industries indicate a total for all uses shown of 157,145 million kilowatt-hours. Bureau of Census data follow somewhat different classifications and details are not comparable in all cases.

¹ Includes all full-time and part-time production and related workers, force-account construction workers, elerical and routine office workers, administrative, supervisory, sales, technical, and all other personnel on the pay rolls of manufacturing establishments. Excludes employees of central administrative offices operated by concerns having 2 or more manufacturing establishments. Wages and salares represent the gross earnings of employees including commissions, dismissal pay, nonproduction bonuses, vacation and sick leave pay, and compensation in kind, and prior to such deductions as employees' social security contributions, withholding taxes, group insurance, union dues, and savings bonds.
² Value of products less cost of materials, supplies, fuel, electricity, and contract work.

¹ Includes all full-time and part-time production and related workers, force-account construction workers, clerical and routine office workers, administrative, supervisory, sales, technical, and all other personnel on the pay rolls of manufacturing establishments. Excludes employees of central administrative offices operated by concerns having 2 or more manufacturing establishments. Wages and salaries represent the gross earnings of employees including commissions, dismissal pay, nonproduction bonuses, vacation and sick leave pay, and compensation in kind, and prior to such deductions as employees' social security contributions, withholding taxes, group insurance, union dues, and savings bonds.
¹ Value of products less cost of materials, supplies, fuel, electricity, and contract work.
³ There were no establishments classified in this industry in 1939.

No. 917.—Manufactures—Value of Products Shipped and Cost of Materials, By Industry: 1947

[In thousands of dollars. This table supplements table 916. Cost of materials and value of products were not compiled for industry groups because of the duplication which arises in the combination of individual industries representing successive stages in the production of finished manufactures. For this reason figures are given in this table only for those individual industries in which little or no duplication arises. Value added by manufacture figures shown in table 916 were usually calculated by subtracting cost of materials, etc., from value of products shipped. For a limited number of industries, however, information was requested on quantity of production, as well as on quantity and value of shipments of product items. For most of these industries, value added for the larger establishments (50 or more employees) was calculated by multiplying the quantity of each item produced by a unit value derived from the shipments data, adding these values to obtain a total value of production, and subtracting therefrom the cost of materials. Consequently, for such industries, value added by manufacture in table 916 does not equal the value of products shipped, less cost of materials, etc., as given in this table]

INDUSTRY	Value of products shipped	Cost of materials, fuel, elec- tricity, and con- tract work	INDUSTRY	Value of products shipped	Cost of materials, fuel, electricity, and contract work

No. 918.—Manufactures—Selected Statistics for Geographic Divisions, by Major Industry Groups: 1947 and 1939

[Value added figures in thousands of dollars. Figures for 1939 adjusted for comparability with 1947. In cases where figures for a geographic division cannot be given separately without disclosing data for individual companies, they have been combined with the figures for one or more other geographic divisions. In such cases, a (4) appears in each column where a figure has been omitted and the combined figures appear, printed in italies, in the column of the last geographic division included in the combination (reading from left to right). As a result, whenever the figures for a geographic division appear in italics, or the symbol d has been substituted, the major industry groups will not add to the printed "All industries, total" for that geographic division]

No. 920.—Manufactures—General Statistics for Standard Metropolitan Areas: 1947 and 1939

[Money figures in thousands of dollars.] Data cover standard metropolitan areas having 40,000 or more manufacturing employees in 1947. These areas replace industrial areas shown in earlier censuses. Industrial areas, as defined in previous years, were groups of contiguous counties having large numbers of manufacturing wage earners. Present standard metropolitan areas are integrated economic and social entities which contain not only highly industrialized counties, but also adjoining counties which, though primarily residential in character, contribute significantly to the industrial counties labor force. The 53 areas presented in this table represent a part of a larger list of standard metropolitan areas recently established by the Federal Government for the use of all Government statistical collection agencies. Standard metropolitan areas are composed of whole counties in all parts of the U. S., with the exception of New England where they are composed of towns. For definition of each area, see 1947 Census of Manufactures preliminary report, series MC 100-3 or final report, Vol. III]

No. 923.—Inventories in Hands of Manufacturers at Beginning and End of 1947, by Major Industry Groups

[In thousands of dollars. Inventory statistics exclude data for industries in printing and publishing groups, small sawmills, and certain small establishments in other industries. It is estimated that for industry groups shown, figures represent 99 percent of all inventories held by them. Figures cover inventories held for account of individual manufacturing establishments and exclude inventories held for account of sales branches, central warehouses, or central administrative offices of manufacturing concerns]

3 Not available.

¹ Basis 24 No. 2½ cans. ⁴ Basis 24 No. 2 cans. ⁶ Included with "all other."

Hawaiian pack plus receipts from Puerto Rico.
 Included in "other fruit juices."
 Calendar year (first) packs; basis dozen cans.

Source: Dept. of Commerce, Office of Domestic Commerce. Data for recent years compiled mainly from annual pack statistics of National Canners Assn., Washington, D. C. Historical series (1944-45 and earlier) from Fruit and Vegetable Canning Industries, 1934-45 (Industrial Series 15), compiled in cooperation with Bureau of Census and Office of Price Administration.

1 Conversion factor used was 56 pounds per bushel when reported in bushels.
2 Wheat, barley, rice, sorghum grain, etc., also mixtures of corn, malt, and rye.
3 Diamait, sulphite liquors, manica meal, maguey juice, maple sirup, cider, corn sirup, potatoes, crude alcohols mixtures, cellulose pulp, chemical mixtures, ethylene gas, etc.
4 A verage for 4 years.
5 Average for 3 years.
6 1930 figure.

1 Includes data for Hawaii for all years and data for Puerto Rico beginning with Aug. 1, 1928.
2 Separate accounts for alcohol produced at industrial alcohol plants required commencing May 1, 1920.
3 Through 1940, represents withdrawals of all products for denaturation, that is, domestic ethyl alcohol, spirits produced by registered distilleries (redesignated upon receipt at denaturing plants as alcohol), and rum. Beginning 1944, represents all products (except rum) used for denaturation, that is, domestic ethyl alcohol, imported ethyl alcohol, and spirits. Rum is included for 1935 and 1940 because denatured rum is included with specially denatured alcohol for those years.
4 Prior to 1944 includes denatured rum

· Prior to 1944 includes denatured rum.

• Excludes vermouth and other aperitif wines.

Standard United States gallon.

• Excludes distilling materials.

Source: Treasury Department, Bureau of Internal Revenue; Annual Report of the Commissioner.

⁵ Represents gross production. Net production (gross production minus products used in redistillation) for such years follows: 1944, 590,929,045; 1945, 650,089,874.

¹ Barrels of 31 wine gallons.
2 Excludes ethyl alcohol.
3 A tax gallon for spirits of 100 proof or over is equivalent to the proof gallon. For spirits of less than 100 proof the tax gallon is equivalent to the wine gallon.
4 Excludes high-proof spirits and unfinished spirits produced at registered distilleries for industrial purposes.
5 Includes ethyl alcohol.
6 Excludes represent and other constit wines.

⁷ Production represents total amount removed from fermenters, including distilling material (substandard wines produced with excessive water or residue materials). In 1949, 286,045,119 gallons of distilling materials were produced.

Includes champagne, other sparkling wines, and artificially carbonated wines.
 Tax is payable on each ½ pint or fraction thereof in each bottle or container.

Source: Treasury Department, Bureau of Internal Revenue; Annual Report of the Commissioner.

No. 930.—Tobacco, Leaf—Amounts Consumed in the Manufacture of Cigars, Cigarettes, Chewing and Smoking Tobacco, and Snuff: 1896 to 1948

[All figures in thousands of pounds. Figures represent the equivalent in unstemmed leaf tobacco of stemmed leaf or scraps, cuttings, and clippings. In the following table the tobacco used in the manufacture of cigars and cigareties was converted on the basis of 3 pounds of stemmed leaf or scraps, etc., to 4 pounds of unstemmed beginning 1915 (conversion prior to 1915 was at the ratio of 3 to 5) and of tobacco and snuff beginning 1903. For 1898 to 1902, tobacco used in manufactured tobacco and snuff was shown only under two heads, namely, "leaf" and "scraps." It is probable that stemmed leaf was included with unstemmed tobacco under the head of "leaf" without the one kind being converted to the equivalent in the other. The conversion ratio of 3 to 4 was applied only to "scraps" for these years. Data exclude tobacco used in bonded manufacturing warehouses. See also Historical Statistics, series J 171, for annual total consumption]

No. 931.—Cotton-System Spindles, Cotton Consumption, and Stocks: 1840 то 1949

[Statistics for 1915 to 1949 relate to 12 months ending July 31 and those for prior years to 12 months ending Aug. 31. For 1946-49, spindles in place include all cotton-system spindles in place regardless of fiber spun. Prior to 1946, "in place" figure represents all spindles in place used exclusively for spinning cotton. Consumption and stocks are expressed in running bales, counting round as half bales, except that all figures, 1840 to 1870, inclusive, and foreign cotton for all years are in equivalent 500-pound bales. See also Historical Statistics, series J 179-180 for data on active cotton-system spindles in the U. S. and total cotton consumed including linters]

¹ For 1945 and earlier years data represent sum of greatest number of cotton spindles reported by each mill as active at any time during year, regardless of length of time operated. Beginning with 1946, active figure includes all cotton-system spindles active last day of year, regardless of type of fiber spun. On July 31, 1949, there were 19,008,000 spindles active on cotton, 814,000 on synthetics, 312,000 on other fibers and blends, and 3,367,000 idle, 3 Includes linters for 1840 to 1908. Figures for all years include foreign and domestic cotton.

3 Not available. 4 Cotton mills only.

4 Includes stocks held in public storage and at compresses beginning 1938.

4 Includes linters for 1906 to 1908. 7 Average, 1909 and 1910.

5 Urgland" includes "American-Egyptian" beginning 1912 (first year produced).

is 1943 and other years not strictly comparable. Census of Manufactures for 1899, 1914, 1929, and 1947 called for a report on looms from those mills whose principal products were wool and hair goods while 1943 inquiry covered all mills consuming weaving yarns spun on woolen or worsted spinning spindles. Includes pile fabric looms conforming with these definitions.

No. 940.-Woolen and Worsted Fabrics-Production, by Kind: 1939 to 1949

¹ The inclusion of "Books and pamphlets printed for publication by others," "Greeting cards printed for others," "Newspapers, ready prints and periodicals printed for others," etc., results in duplication in the aggregate value and receipts, as follows: 1937, \$153,460,000: 1939, \$201,627,000: 1947, \$482, 292,000. (No separate data available for greeting cards for 1937.) These amounts represent receipts by commercial printers for work done by them for other printers or for publishers, and consequently enter twice into the aggregate value and receipts.

¹ Includes souvenir cards.
¹ Includes souvenir cards.

Source: Department of Commerce, Bureau of the Census; reports of Census of Manufactures.

No data.

⁴ Includes publication of picture postcards, souvenir cards, sheet music, bluebooks, directories, catalogs, maps, atlases, globe covers, shopping news, and business service publications.

⁵ Included with "Other printing, gravure."

No. 947.—CHEMICALS—PRODUCTION, BY KIND, 1939 to 1949

[Data for chemicals shown are restricted to a selected group comprised for the most part of inorganic chemicals and related products which are sufficiently important economically to justify publication. Data for production by Government-owned arsenals, ordnance works, and certain plants operated for Government by private industry are excluded, except that data for chemicals manufactured by Tennessee Valley Authority are included]

1 Preliminary.

Includes data for small amount of aqua ammonia reported by 1 company.
 No comparable data.

No comparable data.
 Excludes byproduct coke-oven production. The 1949 data include 53,870,000 pounds of synthetic ammonium sulfate produced in coke plants.
 Proportion of estimate, 5 percent.
 Not shown separately to avoid disclosure of individual operations.
 Includes data for deodorizing, decolorizing, and water purification grades. Data for gas-mask solvent recovery

grades excluded.

s Includes data for molybdate chrome orange.
Includes quantities diverted to manufacture of caustic soda and sodium bicarbonate and quantities processed to finished light and finished dense soda ash.

Excludes quantities converted to finished dense soda ash.

Delicated in cooperation with Bureau of Mines.

Proportion of estimate, 3 percent or less.

12 Liquid production figures represent total production for each process, including quantities later evaporated to solid caustic and reported as such.

14 Includes sulfuric acid of oleum grades.

¹ Less than 0.5 long tons.

² Allocations for export, 1942, actual exports begin with 1943.
3 Differences between "new supply" and "distribution" not precisely comparable with "stocks" due to yearend and inventory adjustments.
4 Includes stocks shipped for export which had not yet cleared port.

¹ Includes production for Virginia.

Source: American Iron and Steel Institute, annual report.

<sup>Includes ferro-alloys made in electric furnaces.
Charcoal included with coke.
Coke and bituminous coal 1900 to 1925.</sup>

⁴ Materials consumed in manufacture of pig iron only.
6 Or as of Jan. 1 of following year.

² Includes production for Iowa.

No. 961.—Pig Iron and Ferro-Alloys and Steel Ingots and Castings— Production, Exports, and Imports: 1871 to 1948

[In short tons (2,000 pounds). Prior to 1901 exports and imports are for years ending June 30 following year specified; calendar years thereafter. Imports are imports for consumption beginning with 1933. All production figures are for calendar years. For figures for earlier years, see Abstract for 1931]

Includes skelp beginning 1922.
Merchant bars include concrete reinforcement bars and, beginning 1934, certain miscellaneous bars previously included in "All other finished rolled production."
A verage for years 1887-90.
A verage for years 1902-05.
A verage for years 1902-05.
A verage for years 1892-95.

Merchant bars and, beginning 1934, certain miscellaneous bars previously included in "1910.
A verage for period July 1, 1897, to Dec. 31, 1900.
A verage for period July 1, 1903, to Dec. 31, 1905.
Small structural forms not included in 1911.

No. 969.—Iron and Steel—Aggregate Exports: 1890 to 1949

[Covers products listed in table 970; excludes data for highly elaborated products of iron and steel. Value figures through 1921 exclude, and those beginning 1922 include data for small items for which quantity figures are not available. Ferromanganese data included for all years. Data for steam and hot-water heating boilers and radiators, formerly classified as heavy from and steel products, excluded beginning with 1922]

[Quantities in thousands of short tons (2,000 pounds); values in thousands of dollars]

No. 974.—Copper and Copper-Base Alloy Rolled, Drawn and Extruded PRODUCTS—SHIPMENTS, BY KIND: 1939 AND 1947

[In short tons (2,000 pounds). Covers shipments and interplant transfers of copper and copper-base alloy products, including production of these items consumed by producing plant in manufacturing fabricated products. These figures, therefore, represent gross shipments of copper and copper-base alloy products. 1939 figures for copper-base alloys refer to brass and bronze products only; figures for other copper-base alloys excluded and to this extent data not comparable with 1947. Data on shipments, interplant transfers, and produced and consumed in same plant have been combined since data are not comparable for each of these measures separately. Some establishments which reported rolling mill and fabricating operations at same location in 1939 treated each of these operations as separate establishments in 1947. For this reason some of tonnage reported as produced and consumed in same establishment in 1939 was considered as interplant transfers in 1947]

PRODUCT	1939	1947
Copper and copper-base alloy wire and cable, bare and tinned	381, 666	911, 207
Unalloyed copper Copper-base alloy	336, 603 45, 063	835, 927 75, 280
Other copper and copper-base alloy rolled, drawn and extruded products	842, 027	1, 526, 783
Unalloyed copper: Rod and bar Plate, sheet, and strip Pipe and tube Copper-base alloys: Rod Shapes, drawn, and extruded Plate, sheet, and strip Plate and tube	1 204, 903 107, 707 72, 795 1 135, 156 2 6, 357 221, 224 93, 885	477, 196 165, 438 185, 910 242, 542 28, 611 329, 467 97, 619

¹ Excludes tonnage of rods reported as produced and consumed in same establishment, most of which was consumed in production of wire, rather than fabricated products.

Includes extruded shapes only.

Source: Department of Commerce, Bureau of the Census; 1947 Census of Manufactures reports.

Not available.
 Represents production-department employees only; not comparable other years.

Represents cost of producing motion-picture films, receipts for use of studio facilities, receipts for laboratory work, and value of other work done.
 Represents cost of positive films made during year by establishments which performed laboratory work in connection with production of theatrical films. Data on cost of positive films made by outside laboratories included in "Receipts for laboratory work."
 Probably some "Educational films" were included as "Other films."

No. 985.—Alaska—Manufactures, by Industries: 1899 to 1939

[Figures for 1939 do not include data for plants reporting products valued at less than \$2,000; those for earlier years cover all plants having products valued at \$500 or more. This increase in minimum value-of-products limit resulted in some reduction in "Number of establishments" reported as compared with what it would have been had minimum of \$500 been retained, but did not seriously impair comparableness of figures for 1939 with those for earlier years. Comparable figures for earlier years are given for all industries for which such figures are availablel

31. Foreign Commerce

(Including International Transactions)

International transactions.—The statistics shown for international receipts and payments, foreign investment, and foreign grants and credits were compiled in the Office of Business Economics of the Department of Commerce.

The international accounts of the United States prepared by the International Economics Division, Office of Business Economics, comprise the international balance of payments (table 988) and the international investment position (table 989). The balance of payments shows for given time periods, e. g., one year, the transfers of assets and the form of compensation for these transfers between this country and the rest of the world; the international investment position indicates for specific dates the value of United States investments abroad and of foreign investments in the United The two types of accounts, however, are not strictly comparable; the transfers of assets between countries as shown in the balance of payments is only one of the factors affecting the value of foreign investments. Other factors not shown in the balance of payments are changes in security values and revaluation of assets, and reinvested earnings and losses. For a detailed discussion and analysis of these accounts, see the Department of Commerce publications, International Transactions of the United States during the War, 1940-45, Economic Seies No. 65, 1948, and The Balance of International Payments of the United States, 1946-48, published in 1949. For current data, see the monthly Survey of Current Business.

Foreign aid has been defined to comprise two categories—grants and credits. Grants are largely outright gifts for which no payment is expected, or which at most involve an obligation on the part of the receiver to extend reciprocal aid to the United States or other countries to achieve a common objective. Credits are loans or other agreements which give rise to specific obligations to repay, usually over a period of years. In some instances assistance has been given with the understanding that a decision as to repayment will be made at a later date. Such assistance is included in grants until such time as an agreement is reached to repay. When repayments are made in cash or long-term credits are established, the grants are reduced accordingly. All known returns to the United States Government stemming from grants and credits are also taken into account.

Tables 990-993 on United States Government grants and credits utilized by foreign countries and reverse grants and credit repayments received by the Government from abroad were prepared by the Clearing Office for Foreign Transactions, Office of Business Economics. These tables also include estimates of the grants remaining unused, data on unutilized credits, including the uncommitted foreign lending authority of Government agencies, and the outstanding foreign indebtedness (excluding World War I debts) at the end of 1949.

Data on United States Government foreign transactions are obtained from Federal agencies which report such transactions to the Clearing Office under Budget-Treasury Regulations or other administrative arrangements. Detailed information on the statistics provided in tables 990–993, and on other foreign activities of the Government, is provided in the regular quarterly reports of the Clearing Office.

The major activities of the Economic Cooperation Administration are summarized in tables 994 to 997, prepared by the Division of Statistics and Reports of that agency. Data are presented on the European Program (known more familiarly as the "Marshall Plan") and the separate programs for Korea and China.

In the ECA tables, colonies and overseas territories of European countries are reported with mother countries; the Saar is shown with France. Commodity groups shown are based on the Economic Cooperation Administration commodity classification. In determining the various reporting groups, an attempt has been made to align the coverage of the summary groups shown in these tables as closely as possible with that of reports on United States exports originating in the Bureau of the Census.

These and other data are published in more detail in the several monthly publications of the Division of Statistics and Reports of the Economic Cooperation Administration which may be obtained directly from the Economic Cooperation Administration, Washington 25, D. C.

Foreign trade.—Statistics on foreign trade are compiled by the Bureau of the Census of the Department of Commerce. Annual statistics through 1946 are published in the annual report, Foreign Commerce and Navigation of the United States. Preliminary statistics for later years are from current corrected data. Monthly data are published in the Monthly Summary of Foreign Commerce of the United States and other monthly reports of the foreign trade series. For a complete list of these reports see Catalog of United States Foreign Trade Statistical Publications issued by the Bureau of the Census.

Statistics covering shipments made after World War II under the Department of the Army Civilian Supply Program are included in the export statistics for 1948 but not for earlier years. Shipments to United States armed forces for their own use are not included in export statistics for any period. Export data include United States exports under the Lend-Lease, United Nations Relief and Rehabilitation Administration, Economic Cooperation Administration, and other foreign aid programs. (See table 999.)

Except as noted (as, for example, in table 1022) the values stated are in United States dollars without reference to changes in the gold content of the dollar. (The statutory price of gold—\$20.67 per ounce—in effect prior to Jan. 31, 1934, was changed on that date by Executive Order to \$35 per ounce. Between Mar. 10, 1933, and Jan. 31, 1934, the foreign exchange value of the dollar was permitted to depreciate as a result of the restriction placed on gold shipments to foreign countries.) The geographic area covered by these statistics, except as noted, is the United States customs area, which includes Alaska, Hawaii, and Puerto Rico, and from Jan. 1, 1935, through Dec. 31, 1939, the Virgin Islands (see headnote, table 1003). Other explanations of the trade tables are given in the introduction to the annual report, Foreign Commerce and Navigation of the United States.

Historical statistics.—In this section, tabular headnotes (as "See also Historical Statistics, series M 42-55") provide cross references, where applicable, to Historical Statistics of the United States, 1789-1945. In that historical supplement to the Statistical Abstract, statistics are carried back year by year as far as possible. See also the historical appendix of the present issue of the Abstract for specific titles of series and the earliest year shown in the supplement.

¹ Unilateral transfers indicate amount of contributions in kind or in cash thru Lend-lease, U. N. R. R. A., E. C. A., personal and institutional remittances, and similar channels. Thus, payments of receipts under unilateral transfers in most cases offset exports or imports, respectively, of goods and services for which present or future compensation is not required.

No. 989.—International Investment Position of the United States: 1939 to 1948

[In millions of dollars. Estimates for end of year; subject to considerable error due to nature of basic data. No allowance for write-offs, war damage, or expropriations without compensation of U. S. direct investments abroad. Direct investments at book value; other types at market or stated values. For 1945-48, value of securities of former enemy countries, or countries where no realistic market can be determined, has been eliminated; not entirely comparable with earlier years due to this and other revisions. See also Historical Statistics, series M 1-13]

No. 990.—U. S. GOVERNMENT FOREIGN AID BY PROGRAM: JULY 1, 1940, TO DEC. 31, 1949

[In millions of dollars. "Foreign aid (net)" represents the gross value of goods, services, and funds furnished to foreign countries through the utilization of U.S. Government grants, loans, and other credits, less the value of similar items received from foreign sources in the form of reverse grants and credit repayments. Grants "unutilized" represent difference between total amount authorized by Congress, and grants utilized. Credits "unutilized" represent difference between total amount authorized by Congress and amounts utilized. "Reverse grants" are comprised of: (a) Goods, services, and funds received through reverse lend-lesse as reported by Treasury Department; and (b) The dollar equivalent of foreign currencies acquired as a result of European recovery and Chinese and Korean aid programs of Economic Cooperation Administration. "Credit repayments" represent amount of principal collections received, excluding repayments on World War I debts]

Represents commercial shipments for all years, shipments to U. S. Government agencies abroad after July 1945, and all shipments under foreign aid programs, except as explained in footnote 3. Excludes shipments to U. S. armed forces abroad for own use.

Lend-Lease shipments made after cessation of hostilities with Japan in August 1945 represent, for most part, merchandise for which arrangements for repayment were completed prior to exportation of merchandise.

Shipments began in 1945, but data not compiled by Bureau of Census prior to 1947. Data for 1947 excluded

Source: Department of Commerce, Bureau of Census; annual report, Foreign Commerce and Navigation of the United States, and records,

from total exports.

Includes all shipments under other foreign aid programs, such as United States Foreign Relief Program, Interim Aid Program, Greek-Turkish Aid Program, Economic Cooperation Administration Program, etc.

Not available.

Excludes shipments under Civilian Supply Program.
 Represents January-June total; separate tabulation discontinued after June 1948.

No. 1000.—Exports and Imports of Merchandise, Gold, and Silver: 1791 to 1949

[In thousands of dollars. For basis of dollar values, see general note, p. 827. Figures are for fiscal years ending Sept. 30, 1791 to 1842, and June 30, 1843 to 1915; calendar years thereafter. For total exports and imports of merchandise by individual years prior to 1941, see table 1001. Merchandise figures include gold and silver prior to 1821. See also *Historical Statistics*, series M 42-55]

No. 1002.—Exports and Imports of Merchandise, Per Capita: 1791 to 1949

[Export figures for 1791 to 1820 are based on total exports including reexports (the latter were then relatively large) and for 1821 to date, on exports of United States merchandise only. Import figures for 1791 to 1820 are based on general imports; for 1821 to 1870, total imports less reexports; and for 1871 to date, imports for consumption. (See tables 1000 and 1023)]

No. 1003.—Merchandise Trade of Continental United States With Foreign Countries and Outlying Territories and Possessions: 1903 to 1947

IMPORTANT NOTE.—This table differs as to its geographic basis from all other foreign trade tables in this section and in other publications: (1) In the case of other tables the data represent the trade of the United States customs area with all foreign countries, including the Philippine Islands and prior to 1935, the Virgin Islands. The U. S. customs area comprises continental U. S., Alaska, Hawaii, Puerto Rico, and during 1935 through 1939, the Virgin Islands. Trade between continental U. S. and the territories mentioned as part of the customs area are therefore excluded from these data. (2) The present table takes continental United States as the basis. In the totals, trade between it and all United States Territories and possessions is included, while the trade between that part of the customs area outside of continental United States and foreign countries is excluded. Practically all other nations calculate their foreign trade in the manner followed in the present table; that is, totaling the trade of the home country with foreign countries and with all outlying areas. Prior to 1901 Alaska was our only outlying area. Therefore, our foreign trade statistics for 1900 and earlier years very nearly represent the trade of continental United States with foreign countries. Data are for years ending June 30 through 1918; thereafter, for years ending Dec. 31. For purposes of continuity of the data in this table, trade with the Republic of the Philippines has been treated as trade with a Territory through calendar year 1946, even though Philippine independence was established in July 1946.

[In thousands of dollars]

No. 1010.—Exports of U. S. Merchandise and Imports—Indexes of Changes IN QUANTITY, UNIT VALUE (PRICE), AND TOTAL VALUE: 1913 TO 1949

[Quantity and unit value indexes have been constructed by so-called "ideal formula," essential feature of which is use of quantities of several articles as weighting factors of their unit values for each pair of years compared. About 265 commodities were ificlized in direct calculations for both exports and imports. It was then assumed that prices of articles in each economic class not directly covered had moved in parallel with those of articles covered and their value, adjusted by computed price index, was included in aggregative totals from which quantity index for each class was calculated. Index of quantity and unit value of total exports and imports was based on aggregate of adjusted totals of classes. In constructing indexes, data for 1919 were linked directly to 1913, and each subsequent year was compared with that preceding. Resulting year-to-year percentages were made into a series by chain method?

Beginning 1946, tractors, parts and accessories included with "Automobiles and other vehicles"; with "Agricultural machinery and implements" in prior years.

Includes explosives, fuses, and blasting caps.
Includes only sporting rifles, shotguns, fireworks, and pyrotechnics. See note 6.
Includes frearms (except sporting rifles and shotguns) and ordnance equipment reported under "Firearms and ammunition" in prior years.

No. 1013.—Exports of United States Merchandise—Value of Selected Articles: 1821 to 1949

[In thousands of dollars. For basis of dollar values, except export figures for 1870-78, see general note, p. 827.

Export figures for those years are mixed gold and currency values. Figures are for fiscal years ending Sept. 30 through 1840, and June 30, 1850 through 1915; calendar years thereafter. In some cases blanks represent entire absence of trade; in other cases the item is not available separately]

¹ Includes fur hats beginning 1921; formerly classified as miscellaneous textile products.

³ Includes sirups and maple sugar prior to Oct. 4, 1913.

⁴ Average for period July 1, 1915, to Dec. 31, 1920.

⁵ Saltpeter transferred to fertilizers from chemicals beginning 1921.

⁶ Less than 500 dollars.

1 Less than \$500. © ¹ Canal Zone included for 1936 and 1937. © ¹ Average for 1938-40. § ¹ Balmans, Leward and Windvard Islands combined as other British West Indies prior to 1942; average for 1941-45 shown under Other British West Indies. © ¹ Average for 1942-45. © ° For statistical purposes, trade with Germany was defined to include (as far as ascretabanable) trade with areas under de facto administrative control of Germany from the following dates to the close of World War II; Austria, May 6, 1835; Sudeten area of Czecho-Slovakia, Nov. 10, 1938; other Czecho-Slovak provinces (Bohemia, Morsia, and part of Slovakia), Mar 18, 1839, Morel territory of Lithuania, Mar 25, 1939, and. Danzig and German-occupied Poland, Nor. 16, 1930. Similarly, trade with Hangary for

those portions of Ruthenia and parts of Slovakia occupied Dec. 30, 1938, and Mar. 19, 1939, respectively. Trade with Czechc-Slovak area occupied by Poland was included with the Polish trade from 196. 30, 1938, to Nov. 16, 1939. Though country classifications used in this table do not recognize de facto boundaries existing in certain geographic areas after World War II, statistics are primarily in terms of this situation. For example, earlain shipments credited to U. S. S. A. Should probably be credited to Estonia, Latvia Russian-occupied Poland, etc., but when the country of ultimate destination or origin of merchandise in terms of prewar boundaries is not readily ascertainable, the de facto situation is reflected in the statistics. O 'Average for 1936-38.

No. 1020.—Exports (Including Reexports) and General Imports of Merchandise, by Country of Destination and Origin: 1936 to 1949—Continued

Shipments on vessels operated by U. S. Army or Navy	(7)	⁷ 82, 287	1, 147, 146				

¹ As reported to Treasury Department by collectors of customs, subject in certain cases to subsequent refund as well as drawback. These figures are somewhat higher than duties as calculated on basis of imports for consumption, as shown in table 1023.
¹ Includes \$8,760,255,000 covering districts for which data are not individually reported.
¹ Data not individually reported.
¹ Data not individually reported.
¹ Duties less cost of collection are turned into the Island's treasury; excluded from totals.
¹ Excluded from totals; not part of U. S. customs area, assessed under tariff law of Virgin Islands.
¹ For 1946, export shipments individually valued under \$25, except shipments by air; for January 1947–July 1948, export shipments individually valued under \$50, except shipments by air; after July 1948, export shipments individually valued under \$50, except shipments by air; after July 1948, export shipments individually valued under \$50, except shipments districts; data for 1947 covers only the period of July through December.

of July through December.

No. 1022.—Exports (Including Reexports) and Imports of Merchandise, by Principal Customs Districts: 1860 to 1949

In thousands of dollars. For basis of dollar values, except export figures for 1870-78, see general note, p. 827. Export figures for those years represent mixed gold and currency values. Figures cover fiscal years to and including 1915; thereafter, calendar years. Import data are "general imports" through 1933; "imports for consumption" thereafter. Areas of districts were rearranged July 1, 1913. Prior to that date some of the districts were more restricted. However, in most cases this change only slightly affects the comparability of the figures. Prior to 1914 the statistics given in the table for Buffalo include the (former) districts of Buffalo Creek and Niagara; those for Michigan include the (former) districts of Superior, Huron, and Detroit; and those for Massachusetts and Maryland were the former districts of Boston and Baltimore, respectively]

No. 1023.—Imports Entered for Consumption and Duties Thereon: 1821 то 1949

[For basis of dollar values, see general note, p. 827. From 1821 to 1866, inclusive, figures of import values represent total imports less reexports, and for 1867 and later years imports entered for consumption. "Ratio of duties to total" is based upon values of imports shown in table. Figures cover fiscal years ending Sept. 30, 1821 to 1842, and June 30, 1843 to 1915; calendar years thereafter. See also Historical Statistics, series M 68-74]

No. 1025.—Imports of Merchandise, Free and Dutiable, and Percent Free, by Economic Classes: 1821 to 1949

[In thousands of dollars. For basis of dollar values, see general note, p. 827. Figures cover fiscal years ending Sept. 30, 1821 to 1840, and June 30, 1850 to 1915; calendar years thereafter, except as noted. Data are "general imports" through 1933; "imports for consumption" beginning 1934. Percentage free in general imports is normally slightly lower than in imports for consumption because relatively more of dutiable general imports are reported as reexported than of free general imports. Moreover, in the period 1922-1933, there is an understatement of free goods in general imports because, for 1922 to 1633, carpet wool used for making carpets and, for 1922 to 1928, wheat imported for milling in bond for exports were reported as dutiable when entered, although no duty was ultimately paid on these products. For adjusted figures see table 492 of 1935 issue of Statistical Abstract. See also Hustorical Statistics, series M 75-86]

¹ Iceland included in Europe. ² Less than \$500. ³ Includes U. S. S. R. in Asia.

Source: Value of imports, Department of Commerce, Bureau of Census; annual report, Foreign Commerce and Navigation of the United States, and records. Duties, Treasury Department, Bureau of Customs.

32. Commerce of Territories and Possessions

All statistics in this section, except as noted, were compiled by the Department of Commerce, Bureau of the Census. These statistics are published in the Monthly Summary of Foreign Commerce of the United States. In the general foreign trade statistics in the preceding section, the Virgin Islands is treated as a foreign country prior to 1935 and its trade with the United States is included while its trade with other countries is not included. On the other hand, Alaska, Hawaii, and Puerto Rico, and for 1935-39, the Virgin Islands, are treated as integral parts of the United States, so that trade between them and continental United States is not included, while trade between them and foreign countries is included. Each of these territories appears as a separate customs district, but beginning with 1940, trade of the Virgin Islands has been excluded from the merchandise export and import figures. Neither trade of American Samoa and Guam with foreign countries nor shipments between them and the United States are included in the general tables on foreign trade. See also table 1003, p. 842.

The tables in this section present the total foreign trade of each of the U.S. Territories and possessions and show separately the trade with United States (unless otherwise indicated) and with foreign countries. The trade with foreign countries represents exports and imports through the respective territorial Customs Districts and does not necessarily represent exports of commodities originating within the designated territory nor imports for direct consumption within the territory. For basis of dollar values,

see general note, p. 827.

No. 1027.—Imports and Exports of Alaska: 1882 to 1949 [In 1947 Alaska shipped domestic silver valued at \$2,067 to the United States]

33. Distribution and Services

Data in this section relate to continental United States.

For additional or related data on distribution and service trades other than those included in this section, consult the index.

CENSUS OF BUSINESS

The primary source of data on distribution and services is the Census of Business. The first Census of Business covered the calendar year 1929. Although the next was scheduled by law to cover the year 1939, two special censuses covering the years 1933 and 1935 were taken before the regular 1939 census conducted as part of the 16th Census of the United States.

In accordance with the provisions of the act of June 19, 1948, the Business Census has been separated from the decennial censuses and is to be conducted at 5-year intervals. The first Business Census under the new act was taken in 1949 covering the year 1948. Results from this Census are not included in this volume but will be included in the 1951 Abstract. These results are being issued in 1950 in four general sets of reports: (1) Preliminary county releases, (2) final area bulletins (States including counties and cities), (3) final subject bulletins, and (4) final trade bulletins.

The business establishments covered in the distribution and service fields included in the Census of Business may be generally described as follows:

Retail trade.—Places of business primarly engaged in selling merchandise in a retail manner to personal and household consumers;

Wholesale trade.—Establishments primarily engaged in selling goods to dealers and distributors for resale or to purchasers who buy for business uses; and,

Service.—Establishments engaged primarily in selling services as contrasted with merchandise as in the case of retail and wholesale trade.

In order that the coverage of distribution operations be complete, the censuses taken in 1929, 1935, and 1939 included information on the distribution of manufacturers' sales showing the proportion of manufacturers' output flowing through various distribution channels.

The most important differences in scope among the four Censuses of Business are to be found in the coverage of service enterprises. Service establishments were not included in the 1929 Census of Business at all. In 1933 the Census of Business was expanded to include certain service enterprises. These can be broadly classified into the following five major groups: (1) personal services, such as barber shops, laundries, etc., (2) selected business services, (3) repair services, (4) places of amusement, and (5) hotels. The 1935 Business Census added a number of important businesses among which were banking and finance, motor transportation, real estate agencies, warehousing, insurance, and radio broadcasting. The types of business added in 1935 were dropped in 1939 along with a number of minor types of service business.

In addition to observing the changes in the coverage of establishments from census to census, it is important to take cognizance of the kind of businesses, broadly defined, not included in any Census of Business. Outstanding in this group are the business activities of doctors, lawyers, dentists, and others performing a professional or scientific service, educational institutions, religious or charitable institutions, hospitals and infirmaries, public utilities, and government operated enterprises. In the

past, these types of economic activity have been omitted largely because of problems in obtaining information or because reasonably adequate data were already available from other sources.

In many of the following tables data from the various Censuses of Business are compared. Adjustments have been made in the figures to make allowances for the changes in scope among the various years compared.

CURRENT STATISTICS

Wholesale trade.—Monthly statistics on wholesalers' sales and inventories, by kinds of business and by geographic divisions, are compiled and published by the Bureau of the Census. These data are compiled on a sampling basis, covering about 3,500 firms. Using these survey data as a basis, monthly estimates of aggregate sales of wholesalers raised to national totals are prepared by the Bureau of Foreign and Domestic Commerce and published in the Survey of Current Business.

Financial statistics relating to corporations in wholesale trade are available from the annual reports, *Statistics of Income*, published by the Bureau of Internal Revenue.

Current data on the production, movement, stocks, carry-over, receipts, and disappearances at principal markets, etc., for major agricultural commodities are available from the Production and Marketing Administration, Department of Agriculture.

As part of its investigations, the Federal Trade Commission has collected operating statistics on wholesalers as well as on the wholesale business of chains in various lines. Financial statistics on corporations engaged in wholesale trade whose securities are listed on the national security exchanges are available from the Securities and Exchange Commission.

Retail trade.—The Bureau of the Census compiles and publishes monthly statistics on trends in independent retail store sales, by kind of business, for the country as a whole and for selected large cities and other local areas; monthly data for all retail trade combined are also provided for a large number of additional cities and local areas. These data are based on reports from a sample of some 34,000 stores. The Census Bureau also issues jointly with the Office of Business Economics of the Bureau of Foreign and Domestic Commerce monthly statistics on the trends and dollar volume of retail chain store and mail-order house sales nationally by kind of business. Monthly estimates of the dollar volume of retail sales by kind of business groups are prepared by the Office of Business Economics and are published currently in the Survey of Current Business.

Indexes of department store sales and stocks are compiled by the Board of Governors of the Federal Reserve System and by each of the 12 Federal Reserve Banks for its district. These indexes are published monthly in the Federal Reserve Bulletin and also in the Survey of Current Business. Monthly and annual statistics on consumer credit are compiled by the Board of Governors of the Federal Reserve System and published currently in the Federal Reserve Bulletin. Financial data for corporations engaged in retail trade and filing income tax returns are published by the Bureau of Internal Revenue in its annual report, Statistics of Income. Financial statistics on corporations engaged in retail trade whose securities are listed on the national securities exchanges are available from the Securities and Exchange Commission.

Service trades.—Typical of the numerous current statistical reports on personal and business services compiled by private agencies are the Horwath Hotel Accountant, Printers Ink, and National Advertising Records. Financial statistics of service businesses derived from corporation income tax returns are compiled and published annually by the Bureau of Internal Revenue in its annual report, Statistics of Income. Current data on service trades are provided by the Bureau of Foreign and Domestic Commerce in its quarterly and annual estimates of consumption expenditures published in the Survey of Current Business.

No. 1035.—Manufacturers' Sales—Distribution, by Primary Channels, by Industry Groups: 1929, 1935, and 1939

[No data are included for following classes of industries: (1) Those in which no sales were made, plants being maintained for purpose of making repairs; (2) those in which plants were engaged primarily in performing labor on materials owned by others so that their sales represented sales of services rather than commodities. This table is limited to industries for which 1929, 1935, and 1939 figures are directly comparable, whereas table 1036 covers all industries for which 1939 figures are available. For comparative purposes, data covering direct export are excluded]

¹ In 1929, sales to or through wholesale branches and sales to retailers for resale were combined for the most part with sales to wholesalers and jobbers.

2 Includes sales to export intermediaries.

4 Includes 16.5 percent "sales to converters."

5 Combined with wholesalers and jobbers.

7 Combined with industrial, etc., users.

¹ Includes sales of certain milk dealers in the amount of \$130,000,000, not included in tables 1043, 1049, and 1051. Data for these concerns were received too late for inclusion in summary tables for 1929.

² Much of increase in sales of filling stations from 1929 to 1939 results from change in classification. Garages primarily sciling gasoline and oil were classified separately as garages in 1929 Census of Retail Trade and included in filling station category in 1939 Census of Retail Trade.

Source: 1929 through 1939, Department of Commerce, Bureau of the Census; Census of Business, 1939, Vol. I. Retail Trade, Part 3. Other years, estimates by Department of Commerce, Office of Business Economics, based on trends shown by statistics available currently; published currently in Survey of Current Business.

¹ Previously published totals for 1929 and 1935 revised to exclude data for service garages and other automotive service businesses whose receipts from service sales exceed their sales of merchandise. These are included in the Census of Service Establishments for 1939.

3 Includes general merchandise mail-order houses.

3 Bicycle shops, included in this classification for 1929, are included in "Other retail stores" for 1935 and 1939.

Figures for 1935 revised to exclude service garages; data to adjust 1929 figures not available.
 Represents, in addition to chain data shown in tables 1049 and 1050, data for multiunit organizations with 4 or more retail units, such as public utility stores, State liquor stores, direct selling (house-to-house), and other lesser

types.

Not strictly comparable with previous years; a schedule form provided for reporting warehouse operations for 1939 resulted in the receipt of a greater number of separate reports.

Data not available.

Includes estimates for a small number of warehouses for which billings were not reported.

Source of tables 1047 and 1048: Department of Commerce, Bureau of the Census; Census of Business, 1939, Vol. I, Retail Trade, Part 3, for table 1047; Part I, for table 1048.

No. 1049.—RETAIL TRADE—NUMBER OF STORES AND SALES, BY TYPE OF OPERATION: 1929, 1935, AND 1939

Source: Department of Commerce, Bureau of the Census; Census of Business, 1939, Vol. III, Service Establishments.

¹ Employees and pay roll include paid executives of corporations but not number and compensation of proprietors of unincorporated businesses.

2 Statistics for 1935, adjusted for comparison, are as follows: Number of establishments, 631,309; receipts \$3,000,600. The adjustment was made by revising the original 1935 figures to include certain kinds of business that were not included in the Service Census but were published in other census reports and by excluding others which were within the scope of the 1935 census but were omitted from the 1939 census. For a comparison of the two items by industries, see source.

2 For figures for earlier years, see table 1060, p 907.

3 Includes manufacturing plants with products valued at less than \$5,000 and therefore not covered by the Census of Manufactures.

No. 1057.—Service Establishments—Summary, by States: 1939

[The census of service establishments covers a heterogeneous group of establishments (see table 1056) engaged primarily in the sale of service, as distinguished from establishments dealing in merchandise. The professional field, the financial, educational, transportation, construction, and diverse other fields of business activity, many of which are covered elsewhere, are not included. Owing to differences in the scope of the 1935 and 1939 censuses of service establishments, the aggregates for 1939 are not comparable with those for 1935 as published in the 1937-40 issues of the Abstract]

No. 1060.—Power Laundries, Cleaning and Dyeing Establishments, and Rug CLEANING ESTABLISHMENTS—SUMMARY: 1919 TO 1939

[All money figures in thousands of dollars. Statistics cover establishments reporting receipts of \$5,000 or more except for 1939 figures in italics, which represent establishments reporting receipts of \$100 or more. The Census of Business for 1939 classified the establishments shown in this table as service establishments and covered those reporting receipts of \$100 or more. See also table 1014 for statistics for 1939. Statistics for 1935 and earlier years were compiled in connection with the Census of Manufactures. Rug cleaning was treated, in general, as an activity of the power laundry industry for 1929 and earlier years]

YEAR	Num- ber of estab- lish- ments		Salaried employ- ecs		Salaries	Wages	Cost of sup- plies, fuel, and pur- chased electric energy	work	Re- ceipts for work done

No. 1061.—Hotels—Summary, 1929 to 1939, and by Size, 1939

[The census coverage of hotels is restricted, in the main, to establishments which are designated as hotels and which provide hotel accommodations as their major business activity. For 1935 and 1939, the canvass was limited to hotels having at least 6 guest rooms or having receipts from room rentals amounting to at least \$500 for a full year's operations. Because of differences in coverage for 1929, 1933, 1935, and 1939, comparable data are available only for year-round hotels having 25 or more guest rooms]

YEAR	Num- ber of hotels	Number of guest rooms	Receipts (thou- sands of dollars)	Employees, full-time and part-time (average for year) 1	Total pay roll (thou- sands of dollars) ¹
All hotels: 1935. 1939. APPENDIX I

TABLE A.—HISTORICAL STATISTICS: 1947 to 1949

[Comprises latest available figures for statistical time series shown in the historical supplement entitled Historical Statistics of the United States, 1789-1945. For 1946 figures, see table 1101 of 1949 Statistical Abstract. In some cases, figures incorporate revisions received too late to make changes elsewhere in volume. Figures for 1949 are generally preliminary; 1947 and 1948 figures are subject to revision. Historical series are listed only where data are available for a year later than 1946. Asterisk (*) denotes series revised for earlier years; for revisions, see App. I, table B, and 1949 Abstract, table 1102. Numbers in boldies (as A 100) are series numbers from historical supplement. "Abstract table No." gives number of table in this edition of the Statistical Abstract in which recent figures appear, usually with more detail than can be shown in this appendix. Where no "Abstract table No." appears, the exactly corresponding series is not shown in this lasue. "Earliest date" represents earliest year for which figures are shown in historical supplement. For general sources and qualifications of figures, see Historical Statistics! of figures, see Historical Statistics]

Not available.
 Contains 21 lbs. of solid pack tuna or 18 lbs. of tuna flakes.
 Contains largely 48 ten-ounce cans of varying net weights.
 Excludes production of acid scrap.
 Beginning 1925, number of animals in herd computed on basis of mortality rates established in 1918 when the herd was comparatively small.
 Figures for years prior to 1925 obtained by actual count in annual census.

Not available.
 Beginning 1947, includes gas stored and lost in transmission.
 Beginning 1947, value at wells.
 Identified as "Natural gasoline produced" in *Historical Statistics*; change in terminology does not affect

coverage, b"L. P. G." means "Liquefied petroleum gases." Manufactured at natural gasoline plants. These series not shown in *Historical Statistics*; presented here to complete picture for natural gasoline and allied products. b Value of products made from domestic, imported, and byproduct crude gypsum.

¹ Comprises substitute series for series H 40-46 for period beginning 1941 as shown in Historical Statistics. Whereas H 40a-46a exclude public temporary structures, series H 40-46 included such structures beginning 1941. SOURCE: for 1930-1947, see Bureau of Labor Statistics, Bulletin 941, Construction and Housing, 1946-1947, for 1948 and later, see Monthly Labor Review and Construction, both published monthly by Bureau of Labor Statistics.
² Includes both private and public permanent units. Also includes prefabricated units. Excludes units in public temporary structures; also excludes conversions, dormitory accommodations, trailers, and military barracks. Estimates are based on building-permit records, which, beginning with 1945, have been adjusted for lapsed permits and for lag between permit issuance and start of contruction. They are based also on reports of Federal construction contract awards and, beginning in 1946, on field surveys in nonpermit-issuing places.
² Private construction costs are based on building permit valuation, adjusted for understatement of costs shown in permit applications. Public construction costs are based on contract values or estimated construction costs for individual projects.
² Not available.
² Now owned and issued by Whitman, Requardt and Associates.
² Total construction and equipment. Average for 5 geographic divisions.

for individual projects.

4 Not available.

5 Now owned and issued by Whitman, Requardt and Associates.

6 Total construction and equipment. Average for 5 geographic divisions.

7 Electrical plant. Average for 5 geographic divisions.

8 Series not shown in Historical Statistics. Data are for the payroll period ending nearest the 15th of the month, and cover all site and off-site wage and salaried employees of private firms whose major activity is construction, but exclude self-employed construction workers, working proprietors, and force-account employees of nonconstruction firms and public agencies engaged in construction activities. Force-account employees are workers hired not through a contractor but directly by a business or government agency, and utilized as a separate work force to perform nonmaintenance construction work on the agency's own properties. Based currently upon monthly reports to the Bureau of Labor Statistics or to State agencies from a representative group of firms in each State. The base figure to which these monthly reports are applied are from unemployment compensation agencies and the Bureau of Old-Age and Survivors Insurance.

Source: Same as for series H 40a-46a.

[Asterisk (*) denotes series revised for earlier years; for revisions, see App. I, table B, and 1949 Abstract, table 1102. Figures for 1949 are generally preliminary; 1947 and 1948 figures are subject to revision. Also, see headnote, p. 909]

Data for 1947-49 are based on sample surveys in April of each year, conducted by Bureau of the Census in

¹ Data for 1947-49 are based on sample surveys in April of each year, conducted by Bureau of the Census in connection with monthly Current Population Survey.

1 A "household," according to present usage of the Census Bureau, comprises all persons who occupy a dwelling unit, that is a house, an apartment or other group of rooms, or a room that constitutes "separate living quarters." The number of "households," thus defined, is the same as the number of "private households" or "families" as the latter two terms were used in the 1940 census reports and in Historical Statistics.

1 Housing figures for 1947, 1948, and 1949 are sample estimates subject to a sampling variation that is large in relation to the year-to-year changes presented, so that changes between successive years are not accurately reflected. The estimates are based on a national sample similar to the Current Population Survey sample described on p. 183.

^{**}Estimated as of Apr. 1 (in headnote). Includes armed forces overseas.

**Nonfarm figures include, and farm figures exclude, the small number of urban-farm dwelling units or households. 6 Not available.

[†] Excludes loans made by trust departments of commercial banks.

[§] Includes fiduciaries, trust departments of commercial banks, real estate and bond companies, philanthropic and educational institutions, fraternal organizations, construction companies, Federal National Mortgage Associations. ciation, Reconstruction Finance Corporation Mortgage Co., and others.

[Asterisk (*) denotes series revised for earlier years; for revisions, see App. I, table B, and 1949 Abstract, table 1102. Figures for 1949 are generally preliminary; 1947 and 1948 figures are subject to revision. Also, see headnote, p. 909]

Rate computed on basis of total passenger fatalities and passenger-miles flown (revenue and nonrevenue).
 Not available.

Although the entire U. S. investment in international institutions, including the subscription of \$687,500,000 in gold to the International Monetary Fund, is included in U. S. investments abroad, the gold held by international institutions or others in the United States is not included as a foreign investment in the United States.

No allowance has been made for write-offs and war damage to American properties in foreign countries.

Includes U. S. Government long-term investments (in billions of dollars), as follows: 1947, \$11.8; and 1948, \$12.9.

⁽sinking fund, etc.).

1 All figures are monthly averages.
2 Includes all officials and employees receiving any compensation except school board members.
3 Average for school term.
4 Effective Jan. 3, 1949, amounts refunded by government, principally for overpayment of taxes, are being reported as deductions from total receipts rather than as expenditures. Also, effective July 1, 1948, payments to Treasury, principally by wholly owned Government corporations for retirement of capital stock and for disposition of earnings, have been excluded in reporting both budget receipts and expenditures.
5 Series not shown in Historical Statistics. Net receipts equal total receipts (series P 89) less appropriation to Federal old-age and survivors insurance trust fund beginning 1937, and refunds of receipts beginning 1931. For figures covering years 1932 to 1946, see p. 308. Source: Annual Report of the Secretary of the Treasury, 1949.
6 Not available separately.
7 The practice of including statutory debt retirements in budget expenditures discontinued, effective 1948.
8 Includes covernment corporations (wholly owned), etc.
9 Excludes transfer of \$3,000,000,000 to "Foreign Economic Cooperation Trust Fund" for expenditures to be made in fiscal year 1949.

made in fiscal year 1949.

Title changed pursuant to act of July 26, 1947; subsequently includes expenditures of Department of Air Force. Expenditures for Office of Secretary of Defense included in series P 103 and P 107.

 Erroneously labeled as "other" governments in Historical Statistics.
 Minor amounts for aid paid to other governments for this function not separately reported; such amounts are included in the category "Other."
 Consists largely of State aid for unspecified purposes; such aid is locally expendable for any function. Includes also minor amounts for functions not shown separately.
 Represents net collections deposited in State clearing accounts.

Comprises combined totals for all cities having 100,000 inhabitants or more in the 1940 census.
 Not available.
 Local shares of State-administered taxes, except any amounts locally collected and retained, are classified as State aid and the cities' shares of such taxes are included in aid received.
 Segregation not available.
 Segregation not available; included in "other" capital outlay.

TABLE B .- REVISIONS IN HISTORICAL STATISTICS FOR 1946 AND EARLIER YEARS

[Series numbers are as shown in table A, this appendix; and in *Historical Statistics of the United States*, 1789–1945. Figures are as provided by source agencies. Revisions for 1945 and earlier years are probably incomplete. In some instances, figures are included to fill cells left blank in *Historical Statistics* because data were not available when that volume went to press. Revisions shown are in addition to those presented in table 1102, 1949 *Abstract*. To bring *Historical Statistics* to date, consult table below and table A of this appendix and tables 1101 and 1102, 1949 *Abstract*. See also Errata Sheet No. 1 (dated Mar. 31, 1950), available on request]

Corrected figure. Incorrectly shown in table 1102 of 1949 Statistical Abstract.
 Revised for comparability with 1947 figures by excluding data for establishments classified as manufacturing in 1939 but classified as nonmanufacturing in 1947. Series J 3, J 5, and J 6 also revised for comparability with 1947 figures by including data for employees of manufacturing establishments engaged in distribution and in construc-

tion work.

3 See footnote 4, p. 937.
4 Corrected figure.
5 Barrels of 31 wine gallons. For years ending June 30. Includes data for Alaska and Hawaii. For 1921-33, only cereal beverages were permitted to be produced. (This note also applies to all data shown for series J 172 in

only cerem everages were permitted to be produced. (Ams and all produced Statistics.)

^a For years ending June 30. Includes ethyl alcohol. Includes data for Hawaii and beginning August 1928, alcohol for Puerto Rico. (This note also applies to all data shown for series J 173 in *Historical Statistics*.)

⁷ Revised to include all cotton-system spindles active July 31, including those consuming 100 percent synthetic fibers and other fibers and blends.

 $^{^1}$ Includes war service appointments, prior to Aug. 16, 1945, and excludes temporary appointments pending establishment of register after that date.

APPENDIX II

Weights, measures, and foreign exchange

UNITED STATES UNITS WITH METRIC EQUIVALENTS

- 1 inch = 2.540 centimeters.
- 1 foot = 0.3048 meter. 1 yard = 0.9144 meter. 1 mile = 1.609 kilometers.
- 1 square yard = 0.8361 square meter. 1 acre = 0.4047 hectare.
- 1 square mile = 2.590 square kilometers. 1 cubic inch = 16.39 cubic centimeters. 1 cubic foot = 0.02832 cubic meter.
- 1 cubic yard=0.7646 cubic meter.

- 1 liquid quart=0.9463 liter.
- 1 gallon = 231 cubic inches = 3.785 liters. 1 bushel (measured) = 2,150.4 cubic inches = 35.24 liters. 1 avoirdupois ounce = 28.35 grams.

- 1 troy ounce=31.10 grams. 1 pound=0.4536 kilogram. 1 long ton=2,240 pounds=1.0160 metric tons of 1,000 kilograms.
- 1 short ton=2,000 pounds=0.9072 metric ton.

UNITED STATES GALLON AND BUSHEL WITH BRITISH EQUIVALENTS

1 United States gallon=231 cubic inches=0.8331 imperial gallon.

1 United States bushel=2,150.4 cubic inches=0.9694 imperial bushel.

APPROXIMATE WEIGHT OF PETROLEUM AND PRODUCTS

In the United States petroleum and its products are measured by bulk, not weight. Whether handled in containers or without them the quantities are customarily reduced to the equivalent of barrels of 42 United States gallons (barrel thus equals 158.984 liters). In many foreign countries these commodities are measured by weight. The specific gravity of the different grades of crude petroleum and of the finished products varies materially. On the basis of approximate averages the Department of Commerce in converting foreign weight statistics to gallons or barrels of 42 gallons uses the factors shown in the following table:

,	WEIGHT C	F UNITED		F BARREL
	Pounds	Kilo- grams	Pounds	Kilo- grams

11 Quotation not available Oct. 6 through Dec. 21.
12 Based on quotations through Oct. 5; rate not certified thereafter.
13 Based on quotations beginning Dec. 22.

BIBLIOGRAPHY OF SOURCES OF STATISTICAL DATA

This bibliography contains under the various subject headings references to the important primary sources of statistical information for the United States. Secondary sources have been referred to if the information contained therein is presented in a particularly convenient form or if primary sources are not readily available. One-time studies presenting compilations or estimates for several years or new types of data not available in regular series are included.

Much valuable information will also be found in State reports and in reports for particular commodities, industries, or similar segments of our economic and social structure. However, because of the large number of such references, they are not included here.

Section references on the right-hand side of each page indicate where data from the report cited appear in the Statistical Abstract. Where current reports and a summary volume are both cited in the bibliography the section reference will often appear opposite the summary volume only. Reference to the sections indicated will enable the user to ascertain the type of information presented in the original source. However, it should not be assumed that all of the subjects from that source are summarized in the Abstract.

The location of the publisher of the report is given except for Federal governmental agencies located in Washington. Major inquiries, such as the Census of Population, are referred to by name rather than by specific volume references under the various topic headings. The final reports of the Sixteenth Census, which include those on the Censuses of Agriculture, Business, Manufactures, Mineral Industries, Population, and Housing, are listed at the end of the bibliography.

SIXTEENTH DECENNIAL CENSUS OF THE UNITED STATES

LIST OF FINAL REPORTS

[Each part of a volume in this list is a separate book or pamphlet. Preliminary bulletins, which were issued in advance of final reports, are not included in the list. A detailed catalog of 16th Decennial Census publications is available upon request.]

Agriculture:

- Vol. I: Farms and Farm Property, With Related Information for Farms and Farm Operators, Livestock and Livestock Products, and Crops Statistics for Counties (6 parts):
 - Part 1. New England, Middle Atlantic, and East North Central States.
 - Part 2. West North Central States.
 - Part 3. South Atlantic States.
 - Part 4. East South Central States.
 - Part 5. West South Central States.
 - Part 6. Mountain and Pacific States.
- Vol. II: Value of Farm Products; Farms Classified by Major Source of Income; Farms Classified by Value of Products, Statistics for Counties (3 parts):
 - Part 1. The Northern States.
 - Part 2. The Southern States.
 - Part 3. The Western States.
- Vol. III: General Report. Statistics by Subjects.
- Territories and Possessions.
- Irrigation of Agricultural Lands.
- Drainage of Agricultural Lands.
- Other Reports:
 - Special Poultry Report.
 - Special Cotton Report.
 - Cross-line Acreage.
 - Cows Milked and Dairy Products.
 - Drainage of Alluvial Lands.
 - Tabular and Graphic Presentation of Specified Irrigation Census Statistics.
 - Abandoned or Idle Farms.
 - Handbook-Census of Agriculture: 1940.
 - Ranking Agricultural Counties.
 - Analysis of Specified Farm Characteristics for Farms Classified by Total Value of Products (Cooperative Study—Bureau of the Census, U. S. Department of Commerce and the Bureau of Agricultural Economics and the Farm Security Administration of the U. S. Department of Agriculture).
 - Crop-Sharing Contracts.
 - Cash Rent (Cooperative Study—Bureau of the Census, U. S. Department of Commerce and the Bureau of Agricultural Economics, U. S. Department of Agriculture).
 - Value of Farm Products by Color and Tenure of Farm Operator.

Business:

- Vol. I: Retail Trade: 1939 (3 parts):
 - Part 1. United States Summaries and General Analyses.
 - Part 2. Commodity Sales and Analysis by Sales Size.
 - Part 3. Kinds of Business by Areas, States, Counties, and Cities.
- Vol. II: Wholesale Trade: 1939.
- Vol. III: Service Establishments; Places of Amusement; Hotels; Tourist Courts and Tourist Camps—1939.
- Vol. IV: Construction: 1939.
- Vol. V: Distribution of Manufacturers' Sales: 1939.

Geography:

Areas of the United States: 1940:

Unincorporated Communities by States, United States.

Manufactures:

Vol. I: Statistics by Subjects.

Vol. II: Reports by Industries (2 parts):

Part 1. Groups 1-10. Part 2. Groups 11-20.

Vol. III: Reports for States and Outlying Areas.

Other Reports:

Man-Hour Statistics for 171 Selected Industries (Cooperative Study—Bureau of the Census, U. S. Department of Commerce and Bureau of Labor Statistics, U. S. Department of Labor).

Changes in the Distribution of Manufacturing Wage Earners 1899-1939 (Cooperative Study—Bureau of the Census, U. S. Department of Commerce and Bureau of Agricultural Economics, U. S. Department of Agriculture).

Mineral Industries:

Vol. I: General Summary and Industry Statistics.

Vol. II: State and County Statistics.

Population:

Vol. I: Number of Inhabitants.

Vol. II: Characteristics of the Population (7 parts):

Part 1. U. S. Summary, Alabama-District of Columbia.

Part 2. Florida-Iowa.

Part 3. Kansas-Michigan.

Part 4. Minnesota-New Mexico.

Part 5. New York-Oregon.

Part 6. Pennsylvania-Texas.

Part 7. Utah-Wyoming.

Vol. III: The Labor Force (5 parts):

Part 1. United States Summary.

Part 2. Alabama-Indiana.

Part 3. Iowa-Montana.

Part 4. Nebraska-Oregon.

Part 5. Pennsylvania-Wyoming

Vol. IV: Characteristics by Age (4 parts)

Part 1. U. S. Summary.

Part 2. Alabama-Louisiana.

Part 3. Maine-North Dakota.

Part 4. Ohio-Wyoming.

Other reports:

Educational Attainment of Children by Rental Value of Home.

Institutional Population 14 Years Old and Over.

Comparative Occupation Statistics for the United States, 1870-1940.

Estimates of Labor Force, Employment, and Unemployment in the U. S., 1940 and 1930

Characteristics of the Nonwhite Population by Race.

Internal Migration, 1935 to 1940:

Age of Migrants.

Color and Sex of Migrants.

Economic Characteristics of Migrants.

Social Characteristics of Migrants.

State of Birth of the Native Population.

Population—Continued

Other reports-Continued

Nativity and Parentage of the White Population:

General Characteristics.

Country of Origin of Foreign Stock.

Mother Tongue.

Differential Fertility, 1940 and 1910:

Fertility for States and Large Cities.

Standardized Fertility Rates and Reproduction Rates.

Women by Number of Children Under 5 years Old.

Women by Number of Children Ever Born.

The Labor Force (Sample Statistics):

Wage or Salary Income in 1939.

Employment and Personal Characteristics.

Education, Occupation, and Household Relationship of Males 18 to 44 Years Old (prepared in cooperation with the Special Service Division of the War Department).

Characteristics of Persons Not in the Labor Force.

Usual Occupation.

Industrial Characteristics.

Occupational Characteristics.

Employment and Family Characteristics of Women.

Families (Including Housing Data):

General Characteristics.

Types of Families.

Employment Status.

Family Wage or Salary Income in 1939.

Tenure and Rent.

Income and Rent.

Characteristics of Rural Farm Families.

Size of Family and Age of Head.

Housing:

Vol. I: Data for Small Areas (2 parts):

Part 1. U. S. Summary and Alabama-Nebraska.

Part 2. Nevada-Wyoming.

Supplement: Block Statistics for Cities.

Vol. II: General Characteristics (5 parts):

Part 1. U. S. Summary.

Part 2. Alabama-Indiana.

Part 3. Iowa-Montana.

Part 4. Nebraska-Pennsylvania.

Part 5. Rhode Island-Wyoming.

Vol. III: Characteristics by Monthly Rent or Value (3 parts):

Part 1. U. S. Summary.

Part 2. Alabama-New Hampshire.

Part 3. New Jersey-Wyoming.

Vol. IV: Mortgages on Owner-Occupied Nonfarm Homes (3 parts):

Part 1. U. S. Summarv.

Part 2. Alabama-New York.

Part 3. North Carolina-Wyoming and Supplements—A. Homes Built in 1935—40 and B. Homes Occupied by Nonwhite Owners.
